## 2026 CAPITAL BUDGET

# Introduction

The City of North Bay's Capital Budget outlines planned investments in infrastructure and assets that support essential services. It focuses on larger, one-time expenditures that provide benefits lasting more than a year, while also allocating funding for master plans, condition assessments, and critical maintenance and ongoing work. This approach ensures existing assets are maintained while planning for new or expanded infrastructure to meet future growth needs.

This document includes the proposed capital budget for the upcoming year and a nine-year capital forecast.

## 2026 CAPITAL BUDGET

The Capital Budget identifies specific projects to maintain, renew, or expand municipal infrastructure, including roads, water and wastewater systems, facilities, equipment, and community spaces.

## 2027 TO 2035 CAPITAL FORECAST

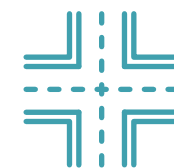

The nine-year capital forecast offers a long-term view of anticipated infrastructure needs, highlights major upcoming projects, and helps the City plan for growth asset renewal, and ensures sustainable service levels. All projects in the forecast are proposed and will only move forward with Council's approval.

**133**  
2026 projects

**\$82.7 million**  
total 2026 investment

**\$149 million**  
anticipated spending on  
roads by 2035

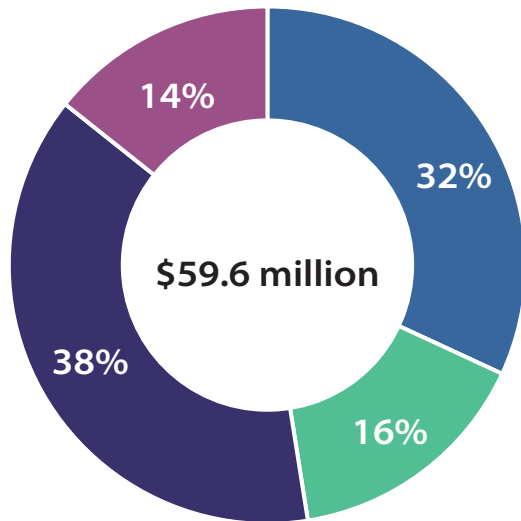

## 2026 CAPITAL BUDGET

# Budget Overview

To provide services, the City needs infrastructure like roads, sidewalks, arenas, water pipes, sewers, snowplows, fire trucks, playground equipment, and more. Once purchased or built, infrastructure must be maintained and replaced over time to maintain service levels to the community.

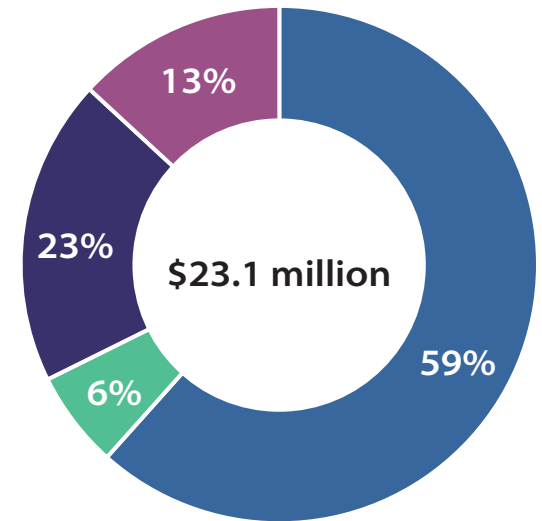

The purchase, construction, repair and renewal of City assets are planned through the capital budget.

The Capital Budget has two components: the General Capital Budget and the Water & Wastewater Capital Budget.

Capital projects are funded by

- Capital levy
- Reserve funds
- Grants and other funding sources
- Debenture/long-term debt

## GENERAL CAPITAL BUDGET

This budget is used to maintain and improve services like roads, recreational spaces, municipal buildings, and equipment while supporting growth and community development. This budget also supports Service Partner capital projects.

Capital levy funding, also known as Pay-As-You-Go (PAYGO) funding, for the City's General Capital Budget comes directly from the General Operating Budget and is primarily supported through property tax revenues.

## WATER & WASTEWATER CAPITAL BUDGET

This budget is used to ensure our water systems and treatment facilities are maintained, upgraded, and expanded as required to meet current and future needs.

Capital levy funding, also known as Pay-As-You-Go (PAYGO) funding, for the City's Water and Wastewater Capital Budget comes directly from the Water and Wastewater Operating Budget and is primarily supported through water and wastewater user rate revenues.

## 2026 CAPITAL BUDGET

# Process

### PLANNING THE BUDGET

The City's Capital Budget is guided by key municipal planning documents, including the Strategic Plan and the Asset Management Plan.

In developing the proposed Capital Budget, the City also considers other important factors such as inflation, project management workload, infrastructure gaps, and debt levels.

1

Proposed capital projects are evaluated by staff based on service levels, strategic priorities, financial implications, legislative requirements, economic and growth impacts, and community support.

2

Staff then prepares a recommended Capital Budget, presented as a listing of annual capital projects along with proposed funding strategies.

3

Special Budget Committee meetings, which are open to the public, review the staff-recommended Capital Budget. Final recommendations are then presented to Council for approval.

## 2026 CAPITAL BUDGET

# Public Engagement

### WE ASKED

In 2025, the City of North Bay engaged residents through online surveys, electronic communications, and in-person discussions.

Asset Management  
Plan (AMP) Survey

Budget  
Survey

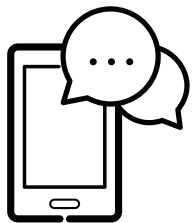

Farmers'  
Market stalls

Social media, email,  
Council meetings

While the Budget Survey captures broader operating priorities – highlighted in the Operating Budget – the AMP Survey is more closely tied to decisions about the City's infrastructure and capital investments.

### YOU ANSWERED

**1,675 responses**  
AMP Survey

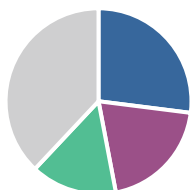

**129 responses**  
Budget Survey

Key themes from both surveys:

- ✓ Residents prioritize maintaining & improving core infrastructure
- ✓ Support for targeted investment in essential services
- ✓ Strong value placed on parks, trails, and facilities
- ✓ Views on tax/fee increases are split: about half support increases – mainly for core services – with slightly stronger support in the AMP survey; the other half prefer maintaining current levels

## 2026 CAPITAL BUDGET

# Public Engagement

Major priorities identified in the AMP Survey represent 62% of the proposed Capital Budget.

For full survey results, visit  
[northbay.ca/AssetManagement2025](https://northbay.ca/AssetManagement2025)

### Water & Wastewater

**27%**  
of 2026 Capital Budget

Water ranked as the first or second highest priority by 70% of respondents

### Roads, Sidewalks & Core Infrastructure

**20%**  
of 2026 Capital Budget

Nearly 3/4 of respondents support expanding road services and service levels

### Parks, Trails & Facilities

**15%**  
of 2026 Capital Budget

Approximately 60% of respondents support expanding services and service levels for parks and trails

## 2026 CAPITAL BUDGET

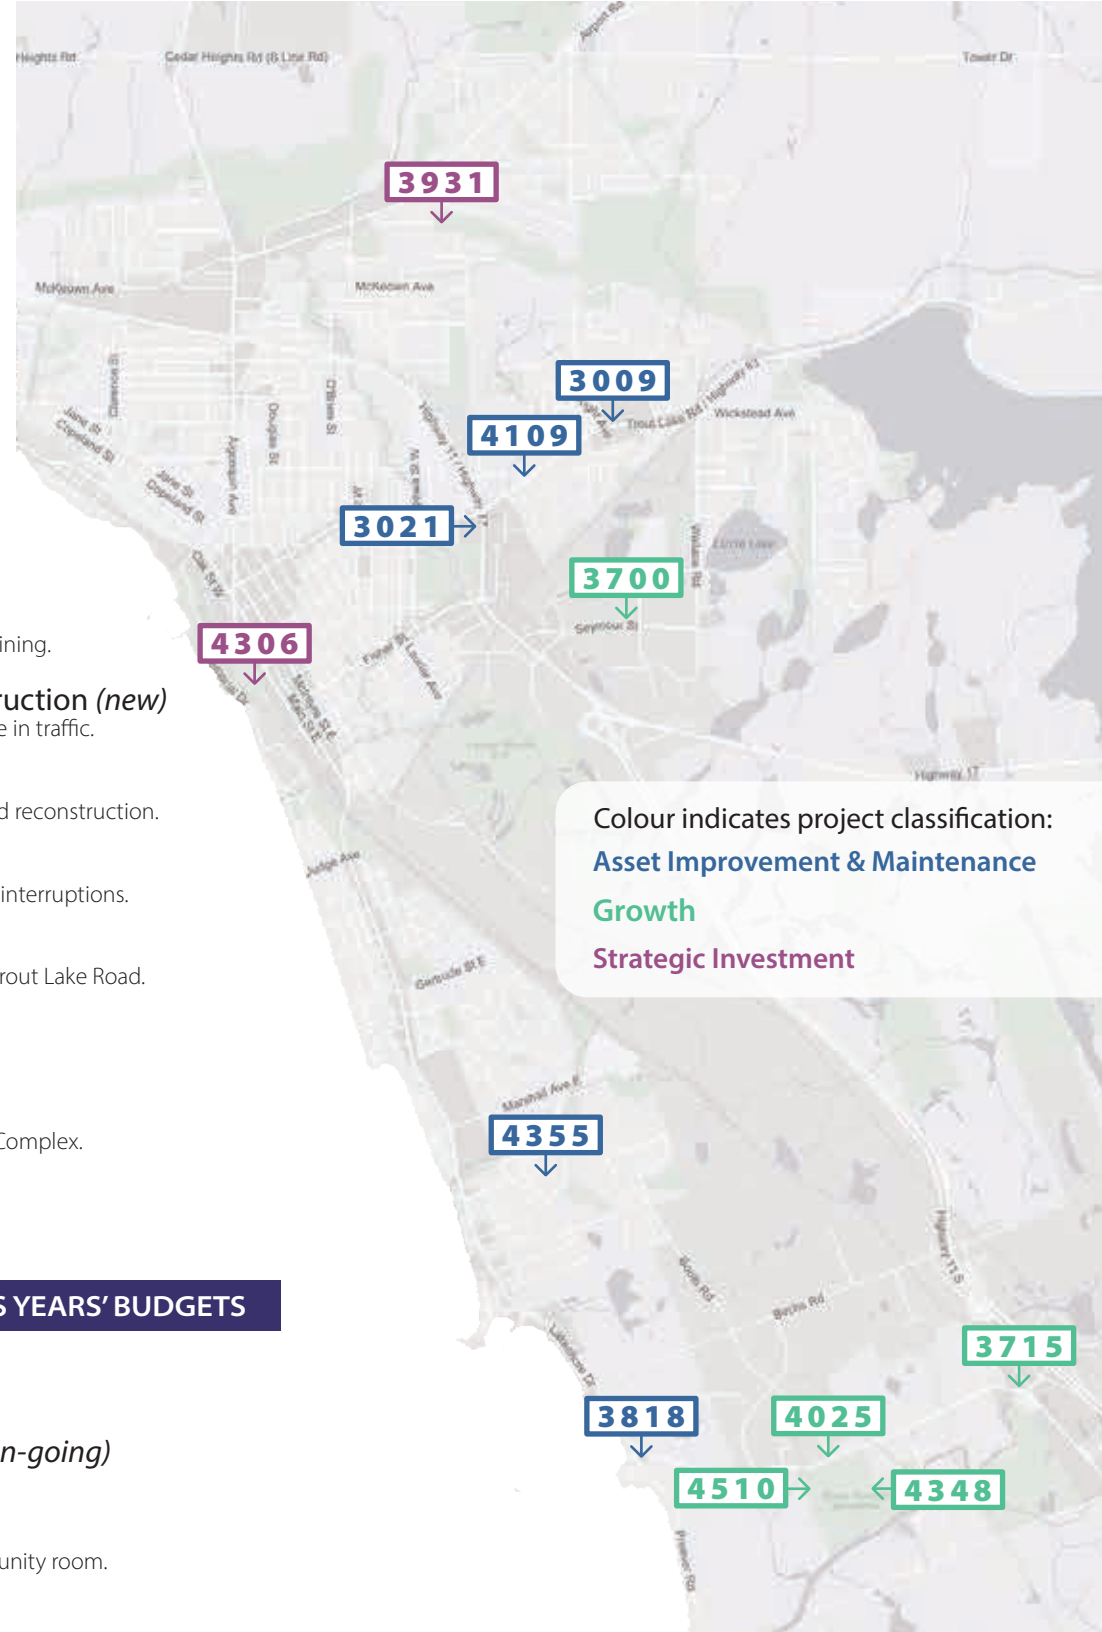

# Featured Projects

### PROJECTS WITH 2026 CAPITAL BUDGET ALLOCATION

- 3009** Trout Lake Road Resurfacing (*new*)  
p. 35 Rehabilitation and widening of road surface from Kingsway Avenue to Giroux Street.
- 3021** Trout Lake Road & Northgate Shopping Centre CIPP (*new*)  
p. 38 Rehabilitation of portions of existing watermain using cured-in-place-pipe (CIPP) relining.
- 3715** Pinewood Park Drive & Lakeshore Drive Intersection Reconstruction (*new*)  
p. 82 Reconstruction to include a roundabout to better accommodate anticipated increase in traffic.
- 3818** Premier Road Pumping Station Replacement (*on-going*)  
p. 93 Replacement of the Premier Road lift station, including all equipment within and road reconstruction.
- 3931** Ellendale Reservoir Second Feed (*new*)  
p. 111 Construction of a second watermain feed to minimize the potential for water supply interruptions.
- 4109** Trout Lake Road & Laurentian Avenue Reconstruction (*new*)  
p. 129 Alignment of the two Laurentian Avenue side street approaches that intersect with Trout Lake Road.
- 4306** Downtown Waterfront Park Construction (*on-going*)  
p. 154 Repurposing of the mini-train underpass to create a pedestrian walkway.
- 4348** Cricket Pitch Construction (*new*)  
p. 175 Development of a dedicated, permanent cricket facility at the Steve Omischl Sports Complex.
- 4355** Kodiak Crescent Reconstruction (*new*)  
p. 177 Reconstruction of Kodiak Crescent's roadway and stormwater system.

### CONTINUING PROJECTS THAT ARE FULLY FUNDED FROM PREVIOUS YEARS' BUDGETS

- 3700** Seymour Street Reconstruction (*on-going*)  
Widening and reconstruction, including new traffic signals and sidewalk extension.
- 4025** Booth Road & Lakeshore Drive Intersection Reconstruction (*on-going*)  
Upgrade of the intersection to accommodate anticipated increase in traffic.
- 4510** Community and Recreation Centre (*on-going*)  
New multi-purpose facility with two ice pads, a walking track, and a multi-use community room.

Projects with reserve (R) or third-party funding (F) are marked accordingly.

Projects that depend on grants or other external funding (F) will only proceed if the funding is approved; if not, they may be cancelled or reallocated with Council approval.

Each project is classified into one of three categories:

**Asset Improvement and Maintenance (AIM)**

Repairs, rehabilitation and maintenance of existing infrastructure, facilities, and equipment

**Strategic Investments (SI)**

Projects that enhance or expand the level of services

**Growth (G)**

Projects that address increased service demand or support City growth.

Projects spanning multiple categories are classified according to their primary focus.

Projects with reserve (R) or third-party funding (F) are marked accordingly.

Projects that depend on grants or other external funding (F) will only proceed if the funding is approved; if not, they may be cancelled or reallocated with Council approval.

Each project is classified into one of three categories:

**Asset Improvement and Maintenance (AIM)**

Repairs, rehabilitation and maintenance of existing infrastructure, facilities, and equipment

**Strategic Investments (SI)**

Projects that enhance or expand the level of services

**Growth (G)**

Projects that address increased service demand or support City growth.

Projects spanning multiple categories are classified according to their primary focus.

<b>Asset Type:</b>	Asset Improvement and Maintenance (General)	<b>Strategic Plans:</b>	Infrastructure / Sustainability, Maintenance
<b>Division:</b>	Capital - Community Services	<b>Project Type:</b>	RECREATION FACILITY
<b>Budget Year:</b>	2026	<b>Active:</b>	Yes

<b>Description</b>			<b>Comments</b>		
This project provides for the replacement of fields at the Omischl Sports Complex when they reach the end of its respective lifecycle, as required.			The synthetic turf (carpet and infill only) has an industry lifecycle of 10 to 20 years. Each year, the condition of these fields will be reviewed and the replacement dates adjusted accordingly.  This budget is for the replacement of the artificial turf on the Football Field (Field B)

<b>Description</b>		<b>Comments</b>	
<p>The comprehensive Built Environment Standard, as a single, unified regulation under the AODA, was never fully released as originally envisioned. Instead, the requirements were incorporated into the OBC rather than a standalone AODA standard. The province made the decision to streamline enforcement through municipal building officials and the permitting process. This shift effectively replaced the need for a separate Built Environment Standard for building interiors, as the OBC's barrier-free provisions cover these aspects. This project will undertake to improve accessibility in City Hall's public washrooms, including the addition of a Universal Standard Washroom.</p>		<p>Condition assessments on City buildings will be initiated once standards are released to identify priority projects.</p> <p>Anticipated that there will be funding opportunities related to this standard which will be pursued as they present themselves. All funding opportunities will be explored during the design stage in 2027.</p> <p>This project was originally in project number 4101GG - City Hall Accessibility Upgrades. Through the 2025 Unexpended Review process, the unexpended budget for this project was closed to reserves with the intention of adding back budget through the 2026 Capital Budget process.</p>

<b>Title:</b>	Trout Lake Road Resurfacing (Kingsway to Giroux)	<b>Project Stage:</b>	Committee of Council Review
<b>Asset Type:</b>	Asset Improvement and Maintenance (General)	<b>Strategic Plans:</b>	Infrastructure / Sustainability, Maintenance
<b>Division:</b>	Capital - Infrastructure & Operations	<b>Project Type:</b>	ROADS
<b>Budget Year:</b>	2026	<b>Active:</b>	Yes

Description				Comments							
<p>The project involves the engineering and construction services to rehabilitate the pavement surface on Trout Lake Road from Kingsway Avenue to Connaught Avenue.</p> <p>Engineering services will include preliminary design, detailed design, agency approvals, contract drawings, specifications, tendering and construction technical assistance.</p>				<p>Trout Lake Road was fully reconstructed in 2009 from Highway 11/17 to Connaught Avenue which is approximately 1 km in length. The construction was completed with funding support from the MTO through its Connecting Link Program. The City performed some crack sealing in 2019 to extend the life of the asphalt. The section of road between Connaught and Giroux was resurfaced in 2015 and is now experiencing surface cracking.</p> <p>Also included in the project is on-road bike lanes or a 3m wide multi-use pathway (in boulevard) or a combination of the two from Highway 11/17 to Giroux Street to connect to the existing facilities on Trout Lake Road constructed in 2022 which will finalize the active transportation needs for this roadway.</p> <p>This project was originally in project number 4311RD - Trout Lake Road Resurfacing (Kingsway to Giroux). Through the 2025 Unexpended Review process, the unexpended budget for this project was closed to reserves with the intention of adding back budget through the 2026 Capital Budget process.</p>

<b>Description</b>				<b>Comments</b>			
The project involves the engineering and construction services to maintain and rehabilitate retaining wall and guide rail systems across the City.  Engineering services will include survey, design, contract drawings, specifications, tendering, construction inspection, contract administration, and project management.				The priority of this project relates to the need to maintain or improve the City's roadside safety infrastructure. An initial inspection of the City's guide rails was completed in 2015 that identified priority repairs and enhancements. The retaining walls inspection is to be completed at a later date.  Work in 2026 will include the review of the 2015 condition assessment, identification of the highest risk guide rails, and construction of the work.

<b>Asset Type:</b>	Asset Improvement and Maintenance (General)	<b>Strategic Plans:</b>	Infrastructure / Sustainability, Maintenance
<b>Division:</b>	Capital - Infrastructure & Operations	<b>Project Type:</b>	STORM SEWER
<b>Budget Year:</b>	2026	<b>Active:</b>	Yes

<b>Description</b>			<b>Comments</b>			
The project involves the engineering and construction services for corrective measures to various storm sewer outfalls to Lake Nipissing.  Engineering services will include condition inspections, contract drawings, specifications, tendering and construction.			There are a number of storm outlet structures at or nearing the end of their service life with critical deficiencies and risk of failure. The mitigation measures will include both repair works to current deficiencies and proactive works to prevent the further deterioration and failure of the highest risk outlets.  In 2015 a study was completed that included inventorying the outfalls and identifying the most critical needs. In future years, work will involve review of the 2015 condition assessment, identification of the highest risk outfalls, preliminary and detailed design, and construction of the corrective measures, which will include erosion control treatments, flushing and pipe repairs.

Description			Comments			
This project involves the engineering and construction services for the rehabilitation of the Trout Lake Road and Northgate Square watermain.			This project will rehabilitate portions of the existing watermain at Trout Lake Road and Northgate Square to provide resiliency in the system and minimize future emergency repairs, as well as mitigating risk to undermining existing structures and the transportation network. Cured-in-place-pipe (CIPP) relining rehabilitation method will be used for these watermain.

<b>Description</b>		<b>Comments</b>	
The project involves the removal of the signalized pedestrian crossing at Boart Longyear and the design, engineering, and construction of a new signalized intersection at Main Street and Nipissing Street.		In 2025 it was identified that the pedestrian crossing traffic signals were causing compliance issues with the all-way stop at Main West and Nipissing Street. The proximity of the traffic signals to the intersection provided false indications of a green light at the intersection leading to a number of vehicles not complying with the stop requirement. This project will remove the existing pedestrian signals and reinstate their function at the Main West and Nipissing intersection through installation of a full set of traffic signals.

<b>Budget Year:</b>	2026	<b>Active:</b>	Yes

<b>Description</b>		<b>Comments</b>	
This program involves the design, engineering, and construction services for the extension of the trunk watermain to connect Sage and Seymour trunk watermain.		The need was identified in the 2008 Infrastructure Background Study that was prepared in support of the Official Plan update. Installation of a new trunk watermain along Sage Road, from Sage to Seymour, Seymour Street, Franklin Street, and Morris Street will provide better distribution of flows and reinforcement of the Zone 1 distribution system. A major portion of the Seymour component is included in projects 3700RD/SS/ST/WS. Also, a portion on Sage Road (Rita Road to Shallot Crescent) was previously completed internally by Public Works resources. This section from Sage to Seymour is through private lands and will require easements or land acquisition.  Related projects include 3700RD/SS/ST/WS.

<b>Division:</b>	Capital - Infrastructure & Operations	<b>Project Type:</b>	STORM SEWER
<b>Budget Year:</b>	2026	<b>Active:</b>	Yes

<b>Description</b>		<b>Comments</b>		
This project provides for the installation of oil/ grit separators within the Tenth Street storm outlet drainage area to replace the function of Tenth Street storm pumping stations.		The Tenth Street storm sewer outlet has experienced water quality issues related to the discharge of stormwater into Lake Nipissing. In 1993 a pumping station was constructed at the outlet to pump stormwater from smaller rain events to the sanitary sewer system. Higher pollutants are associated with the initial wash off of surface materials from roads and other surfaces. This project will replace the function of the pumping station through the strategic construction of oil/grit separators throughout the stormwater drainage area, allowing for the eventual elimination of the pumping station.

Description			Comments		
This project provides for the engineering services for completion of an Environmental Assessment to evaluate the alternatives for the replacement or removal of the bridge.			The Lamorie Bridge spans over the Lavase River and an ONR rail line. This bridge underwent rehabilitation in 2023 which is expected to extend its useful life by 10 to 15 years. Following the end of the bridge's useful life, an environmental assessment will be conducted to determine the alternatives for the replacement or decommission of the bridge. The environmental assessment will also look at alternate routes, such as a new extension of Riverbend Road between Birches Rd and Lakeshore Dr.

<b>Division:</b>	Capital - Community Services	<b>Project Type:</b>	RECREATION FACILITY
<b>Budget Year:</b>	2026	<b>Active:</b>	Yes

<b>Description</b>				<b>Comments</b>			
This project will provide the funding for the design and construction of an interactive digital display honouring North Bay sports hall of fame inductees.				As per Report to Council CSBU 2025-042, under an agreement with the North Bay Sports Hall of Fame, the concept would involve a dedicated area in the new Community and Recreation Centre with a digital presentation of North Bay Sports Hall of Fame inducted members. The interactive digital display would allow visitors to explore content through touch, making it easy to search for specific individuals, sports, time-periods, pictures, videos, etc.  Following the finalization and approval of the agreement with the North Bay Sports Hall of Fame, the cost of the design, construction, and on-going hardware maintenance of the interactive digital display will be the responsibility of the City. On-going programming and creative content will be the responsibility of the North Bay Sports Hall of Fame.

Description				Comments			
This project is to provide replacement of equipment at the leachate treatment as it reaches end of its useful life.				The Leachate Treatment Plant is required as part of the Landfill's Environmental Compliance Approval and is essential in ensuring the protection of the environment. The Leachate Treatment Facility was constructed in 2016 and blowers, pumps and analyzers will require replacement by 2035.

<b>Description</b>		<b>Comments</b>	
This project provides for the engineering services for initiation of road safety programs, safety reviews, as well as for design and construction services for implementation of road safety countermeasures.		The City completed a Road Safety Strategy in October 2024, which provided a 5-year road safety action plan (2025-2029). The strategy identified six emphasis areas (intersections, distracted driving, aggressive driving, pedestrians, cyclists, and school zones) and developed a countermeasure matrix to plan for and to implement programs and physical measures to improve road safety. In addition to integration of road safety recommendations within existing capital projects, this project will initiate road safety programs, such as a road safety database, traffic data collection, and traffic calming plans. This project will also be used to perform road safety reviews and audits, as well as construction and installation of physical road safety measures, such as signs, pavement markings, and medians.

<b>Division:</b>	Capital - Sewer	<b>Project Type:</b>	SANITARY SEWER
<b>Budget Year:</b>	2026	<b>Active:</b>	Yes

<b>Description</b>				<b>Comments</b>			
This project provides for the engineering services to implement the City's Consolidated Linear Infrastructure Environmental Compliance Approval.				In 2022, the City received approval from the Ministry of Environment, Conservation, and Parks (MECP) for a new program for Consolidated Linear Infrastructure Environmental Compliance Approvals (CLI ECA) for stormwater management systems and sanitary sewer collection systems. The new program allows the City to approve new installations or modifications of these works and replaced the former Transfer of Review Program whereby the City would review engineering designs on behalf of the MECP, but final approval would still be required from the MECP. The new program expedites the review and approval process and is of great benefit for new development and for the City's capital program. The CLI ECAs include a number of requirements that are to be fulfilled by the City, as well as a schedule to complete the requirements. These requirements include operation and maintenance manuals, monitoring, and a wet-weather flow analysis. This project will utilize a consultant to complete the required documents and analyses.  Related projects include: 3052ST

<b>Description</b>		<b>Comments</b>	
This project provides funding to implement recommendations identified through the Digital Modernization Strategy and the Corporate-Wide Customer Service Strategy. These strategies are being developed as part of the Organizational Review Implementation Plan approved by Council.		A comprehensive digital modernization strategy ("DMS") and a corporate-wide customer service strategy ("CWCSS") were identified as priority projects in the City's Organizational Review Implementation Plan. The strategies will guide the City's modernization efforts to improve internal business processes and overall customer experience. The strategies will integrate to serve as a comprehensive roadmap to transform the delivery of services over the next 5 years to improve operational efficiency and effectiveness, enhance customer service, enable data-driven decision making and position the City for future innovation and continuous improvement.  Perry Group Consulting Ltd was engaged in 2025 to complete a DMS and a CWCSS for the City of North Bay. The strategies and implementation plans are expected to be finalized and presented to Council in Spring 2026. This project provides funding to implement recommendations approved by Council following the Perry Group's final report and presentation.

<b>Description</b>				<b>Comments</b>			
This project seeks to replace two major components of the ice plant at Boart Longyear Memorial Gardens that have reached or are approaching their end of life. The new system is expected to improve system efficiency, safety and longevity for the ice plant.				The chiller at Boart Longyear Memorial Gardens has reached the end of it's service life and is required to be replace in accordance with provincial legislation. The current chiller is shell and tube. This project will upgrade the system to a modern plate and frame chiller, which will reduce the volume of ammonia onsite by up to 80%, and can be renewed for a small fraction of the cost of replacement extending expected life up to 50 years. This results in approximately half of the estimated lifecycle cost of the shell and tube system.

Description			Comments		
This project provides for the replacement of the Public Works fuel dispensing system.			The Public Works fuel dispensing system will be coming to end of life around 2035. The replacement includes the tanks, pumps, monitoring system, and software integration for Fleet management.  Funding for this project will be primarily through the reserve fund 99553R - Fuel Dispensing Reserve.

<b>Description</b>		<b>Comments</b>	
This project provides the funding for the replacement and the upgrade of the Parks fuel dispensing system.		The existing Parks fuel dispensing system is outdated and does not meet current safety and environmental code requirements, creating compliance and operational challenges. This project will replace and upgrade the system to ensure regulatory compliance while improving efficiency by enabling on-site fueling for all Parks fleet vehicles and equipment, significantly reducing travel time and costs associated with refueling at external locations. In addition to supporting day-to-day operations, the upgraded system will be designed to serve as an emergency backup fueling source for Public Works and Emergency Services, strengthening the City's resilience and continuity during critical events.

<b>Description</b>				<b>Comments</b>			
This project provides for the replacement of five (5) conventional transit buses with five (5) new hybrid buses.				Five (5) conventional transit buses have reached the end of their useful life and are due for replacement. The replacement of these 5 buses was approved under ICIP project ICIP-NTB-20. This ICIP project included the replacement of 8 conventional buses with 8 conventional hybrid buses. The purchase of the first 3 buses was done through 8025FL - Vehicle and Equipment Life Cycle 2025; however, this project was created for better tracking and reporting of the next 5 bus purchases.			
				The City continues to participate in the Metrolinx joint procurement of all transit and specialized buses as per resolution 2020-80. The purchase of these 5 buses, including additional commissioning costs, Metrolinx participation fee, and potential tariff implications, was approved through Report to Council CORP 2025-105. Through this Report to Council, it was noted that 2 of the 5 buses were earmarked for replacement in 2025 and the remaining 3 buses represent a pre-committed against the 2026 Capital Budget.			
				This project is primarily funded through ICIP with remaining funding through reserve 99586R - Fleet Life Cycle Reserve.

<b>Description</b>			<b>Comments</b>	
This project provides the funding required to review and update the Asset Management Plan every 5 years.			To comply with Ontario Regulation 588/17 under the Infrastructure for Jobs and Prosperity Act, the City must review and update the Asset Management Plan every five years. The update will ensure accurate asset data, lifecycle strategies, and risk assessments, while aligning with current legislation and best practices. This work supports informed decision-making, financial sustainability, and regulatory compliance. The project will involve the engagement of qualified consultants to provide support through the review and update of the plan.  This project will be funded from the General and Water and Wastewater capital budgets.

Description				Comments			
This project provides the funding to review and update several financial policies and By-laws.				The City is committed to reviewing and updating several financial policies and By-Laws; for example, the Long-Term Capital Funding Policy, Reserve Policy, Investment Policy, and the User Rate By-Law, in order to ensure these policies and By-Laws reflect best practices, financial transparency, lifecycle forecasting, and regulatory obligations. As these policies are interrelated and must remain aligned and cohesive, the City plans to engage qualified consultants to provide expertise and ensure consistency across all updates.

<b>Division:</b>	Capital - Infrastructure & Operations	<b>Project Type:</b>	STORM SEWER
<b>Budget Year:</b>	2026	<b>Active:</b>	Yes

Description				Comments	
<p>The project provides for engineering and construction services for major culvert improvements at various locations along the Pinewood Fingers Creek. Culvert upgrades anticipated includes the CP Rail Crossing, removal of the historical CN Rail Crossing, upsizing the culvert from Jane Street to Copeland Street, channelization downstream of Tackaberry Drive, upsizing the culvert crossing Tackaberry Drive, and upsizing the culvert crossing the Ministry of Transportation Highway 17 corridor.</p> <p>Engineering services will include condition inspection, preliminary design, detailed design, agency approvals, contract drawings, specifications, tendering and construction.</p>				<p>The Pinewood Fingers Creek has various culvert constraints that constrict the creek flow and add to flooding hazards. Flood flows at the culverts represent a significant risk to wash out type collapse of the culverts and roads.</p>	
				<p>Flood flows through the yards between Jane Street and Copeland Street and backwater flooding to McNamara Street are the primary residential property flooding concerns. These hazards are expected with larger storms which occur infrequently (every 25 to 100 years) and as such are not considered an on-going nuisance hazard but rather a larger scale community protection concern which will need to be addressed.</p>

Description				Comments		
This project provides for the development of new parks within the City. The development of the new parks is supported by the recommendations in the City's Parks Master Plan and Official Plan.				Council has approved an updated Parks Master Plan on November 16, 2021 as per Community Services Committee Report 2021-16.		
				Based on the approved 2021 Parks Master Plan and the City's Official Plan, areas for the development of new neighbourhood parks will be assessed to determine priorities. The forecast is reviewed annually to determine if any new parks are required as a result of development.		
				This project has been identified to be funded partially from the Parklands Reserve Fund (99501R) established by the Planning Act to fund the acquisition of lands to be used for park or other public recreational purposes, including the erecting or repairing of buildings or other structures.		
				2026 budget will provide for park development of Trillium Woods, including fill, topsoil, grass and fencing and access upgrades to Four Mile Lake Memorial Park.

<b>Description</b>			<b>Comments</b>		
The project provides for the completion of various studies including the Population, Household and Employment Forecast and Parks Master Plan leading to the 5-year review of the City's Official Plan. Planning Act legislation makes the 5 year review of the Official Plan mandatory.			The City's Official Plan requires a review every 5 years. In order to complete the review, a number of background studies have been completed. This project will enable the update to the City's Parks Master Plan (2021) and the Population, Household and Employment Forecast (2019). These studies are in addition to the Parks and Active Transportation Plan Update (2019).  The Official Plan review has been on pause over the past few years as a result of COVID (Province requested) and the number of Planning Act changes over the past few years.  The budget in 2030 is for the completion of the next iteration of the 5-year plan.

<b>Description</b>		<b>Comments</b>		
The program provides for the development of infrastructure at the Waterfront to support commercial investment.		<p>In July 2019, Council approved the Preferred Alternative for the phased replacement of the King's Landing Wharf with a naturalized spit and expansion of the pier on the south side of the marina as recommended by the Schedule C, class environmental assessment (EA) as shown on Appendix 'A' attached to Report to Council EESW 2019-13. Council also directed Staff to complete the Schedule C, Class EA Report and table it for the 30 day review period.</p> <p>The preferred alternative includes 4 phases: Phase 1: Major Rehabilitation of Existing King's Landing Phase 2: Construct New South Pier / Commercial Area Phase 3: Construct Rock Fill Wavebreak Phase 4: Landscape / Naturalize Wavebreak</p> <p>In June 2020 MECP notified the City that they had no further input or objections to the Project. Therefore, the Schedule C, Class EA is complete.</p> <p>Final design and issuance of a tender for construction of the preferred alternative will be initiated depending on the availability of the necessary funding and direction of Council.</p>

<b>Division:</b>	Capital - Infrastructure & Operations	<b>Project Type:</b>	ROADS
<b>Budget Year:</b>	2026	<b>Active:</b>	Yes

<b>Description</b>		<b>Comments</b>	
<p>The project involves the engineering and construction services for the connection of Norman Avenue to Chapais Street. Engineering services will include an environmental assessment (EA), preliminary and detailed design, agency approvals, contract drawings, specifications, tendering and construction technical assistance.</p> <p>Included in these works are extensions to the trunk watermain that are critical to providing redundancy protection for the City's water network. These works will also tie in with future works related to the proposed North Bay Expressway.</p>		<p>The 2008 Infrastructure Background Study that was prepared in support of the Official Plan update identified that it is desirable to connect the Connaught/Norman area to the Chapais/McKeown area. This transportation link would connect the O'Brien Street and Trout Lake Road arterial.</p> <p>In addition, the study identified that future development would require watermain distribution improvements, including a new 600 mm watermain system along Norman Avenue, Chapais Street and Lansdowne Avenue.</p> <p>Related projects include 3701ST/WS.</p>

The project involves the engineering and construction services for the connection of Norman Avenue to Chapais Street. Engineering services will include an environmental assessment (EA), preliminary and detailed design, agency approvals, contract drawings, specifications, tendering and construction technical assistance.				The 2008 Infrastructure Background Study that was prepared in support of the Official Plan update identified that it is desirable to connect the Connaught/Norman area to the Chapais/McKeown area. This transportation link would connect the O'Brien Street and Trout Lake Road arterial.	
Included in these works are extensions to the trunk watermain that are critical to providing redundancy protection for the City's water network. These works will also tie in with future works related to the proposed North Bay Expressway.				In addition, the study identified that future development would require watermain distribution improvements including, a new 600 mm watermain system along Norman Avenue, Chapais Street, and Lansdowne Avenue.	
				Related projects include 3701RD/ST.

Description				Comments	
The program provides for the rehabilitation and/or development of Waterfront (Park) tourist related commercial attractions and/or related facilities (washrooms etc.).				The City completed a Waterfront Tourism Attraction Feasibility Study (2014) and a Downtown Waterfront Land Use Master Plan (2017), both identifying the need for commercial attractions and related facilities at the Waterfront and Downtown. The King's Landing Redevelopment EA (2019) further outlined the preferred redevelopment option for King's Landing.	
				The funding projected for 2030/2031 will support the modernization and functional improvements of the City-owned waterfront and marina facilities, aligning with the commercialization vision and King's Landing redevelopment outlined in these studies.	
				If commercialization does not move forward in a timely manner, the budgeted funds will be required to rehabilitate and modernize the current facilities to meet current needs and functional standards. Planning and design are set for 2030, with construction to follow in 2031.

Description				Comments			
The project involves the engineering and construction services to reconstruct the intersection of Pinewood Park and Lakeshore Drive. Engineering services include an environmental assessment, preliminary design, detailed design, agency approvals, contract drawings, specifications, tendering, and construction.  Road works include the road base aggregates, asphalt, curb, gutter, and grass boulevard.				With the water and sanitary servicing works complete along Pinewood Park, future growth along the corridor will change the traffic patterns and volumes. This intersection was included in the municipal class environmental assessment (EA) for Lakeshore Drive and Pinewood Park Drive that was concluded in 2023. The EA concluded that the current intersection configuration will not support the future change in traffic and will need to be reconstructed to a new configuration. The preferred alternative for the intersection is a roundabout.			
				Related project includes 4005RD.

Description				Comments	
<p>The project involves the engineering and construction services for upgrading the existing 100 mm distribution watermain, adding a new 400 mm transmission watermain, and adding a new 500 mm forcemain to twin the existing Marshall sanitary pumping station forcemain. An environmental assessment will also be conducted to look at road upgrades.</p> <p>Engineering services will include pre-engineering (survey and geotechnical), preliminary design, detailed design, agency approvals, contract drawings, specifications, tendering and construction.</p>				<p>Watermain service along the entire Lakeshore Drive corridor is severely undersized and a new trunk watermain is required to provide adequate water supply. This work was first identified in 1977 and was targeted for construction at the time of reconstruction of the road surface to maximize the value of the road asset.</p> <p>In 2003, efforts for the watermain construction commenced; however, the project was postponed due to funding constraints. Since then, the road surface has been rehabilitated through the resurfacing program to extend the life of the existing pavement.</p> <p>The need was more recently confirmed again in the 2008 Infrastructure Background Study that was prepared in support of the Official Plan update. Installation of a trunk watermain from Judge Avenue to Sunset Boulevard will be carried out over two phases - Phase 1 will include Judge Avenue to Gertrude Street, and Phase 2 will include Gertrude Street to Marshall Avenue. Additionally, watermain upsizing from Marshall to Birchs is currently being constructed in stages by the Public Works Department.</p> <p>The Marshall sanitary pumping station currently has no outlet in proximity to the station to relieve flow in the event of an emergency at the pumping station or a downstream break on the forcemain. During these emergency situations, sewage flows may back up into upstream buildings. A new forcemain to twin the existing forcemain will provide redundancy in the system to mitigate the risks of these emergency situations.</p> <p>Related projects include Phase 1- 4125RD/ST/SS/WS, Phase 2- 3802ST/SS/WS</p>

<b>Description</b>		<b>Comments</b>	
The project involves the necessary remedial works to the structure to repair various components of the Lakeshore Drive Overpass (over ONR and CP Rail).		<p>The Lakeshore Drive Overpass is the City's largest bridge structure. Major rehabilitation and reconstruction works were carried out in 2016/2017 including the abutments, abutment seats, piers, pier caps, etc., as well as replacement of the bridge deck including asphalt, sidewalks, curb and gutter, barrier wall and streetlights.</p> <p>Additional rehabilitation works have been identified for the future.</p> <p>This project directly supports the initiatives outlined in the Asset Management Plan by implementing actions that improve asset performance, reliability, and sustainability.</p>	
<b>Scenario Description</b>		<b>Scenario Comments</b>	
		<p>The following details support the Capital Forecast for 2027 to 2035:</p> <p>2032 Perform a bridge inspection and assessment</p> <p>2033 Repairs and rehab based on the assessment performed in 2032</p>

<b>Description</b>			<b>Comments</b>		
The project involves the necessary remedial works to repair the Trout Lake Road Overpass over the ONR tracks.			The Trout Lake Road Overpass is the City's second largest bridge structure. Significant rehabilitation works were carried out in 2017 including rehabilitation to the wearing surface, sidewalk, curb, median and barrier walls.  Additional rehabilitation works have been identified for the future.  This project directly supports the initiatives outlined in the Asset Management Plan by implementing actions that improve asset performance, reliability, and sustainability.

<b>Description</b>				<b>Comments</b>			
The purpose of this project is to identify the fire protection needs of the community in the short and long term and to balance these needs against the municipal goals and objectives.				Master Plans are comprehensive long-range municipal planning documents that guide how a community's future growth and development will occur through investment over time. Master Plans often begin with an assessment of current conditions, and consider strategies for gradual improvement. The Fire Master Plan will help to ensure our delivery of fire protection and related services keeps pace with development, technology, and continued growth in North Bay.			
<b>Scenario Description</b>				<b>Scenario Comments</b>

<b>Division:</b>	Capital - Sewer	<b>Project Type:</b>	SANITARY SEWER
<b>Budget Year:</b>	2026	<b>Active:</b>	Yes

<b>Description</b>				<b>Comments</b>			
This project provides for the replacement of the intake chamber at the Wastewater Treatment Plant as well as the replacement of aging collection system infrastructure.				This project at the North Bay Wastewater Treatment Plant involves decommissioning the existing 65 year old intake chamber and redesigning and installing a new intake chamber and overflow weir to mitigate the risk of flooding of the Wastewater Plant and collection system at Lake Nipissing's 100-year flood elevation. This improvement would rehabilitate aging critical wastewater infrastructure, significantly reduce the risk of negative outcomes for the community, protect and maintain existing housing and increase resiliency to climate change.

<b>Description</b>		<b>Comments</b>		
The program involves the construction of a landfill gas collection system in each of the landfill cells as the landfill expands. The collection system includes piping, valves, controls, and wells.		Collection of landfill gases is necessary to remain compliant with Merrick Landfill's Certificate of Approval and to efficiently supply landfill gas to Merrick's Gas Utilization System. Expansion is related to the timing of the filling of the working Cell and Landfill Leachate Management Cell expansion, which is done, approximately, every 4-5 years. Funding from Merrick Landfill Reserve (99515R) will be utilized.  Related project includes 4203GD.

Description				Comments	
<p>This project is to provide for the construction of the Larocque booster pumping station (BPS).</p> <p>The third phase of the Cedar Heights water infrastructure upgrades and expansion is to construct a booster pumping station near the Larocque standpipe. Under certain conditions some areas serviced by the standpipe will not have sufficient pressure to meet current standards; therefore, a booster station is required to increase the pressure.</p>				<p>Engineering services were previously completed for an environmental assessment, preliminary design, detailed design, agency approvals, and contract drawings. The design was "on the shelf", and with construction anticipated in 2027, it was prudent to review and update the design and tender package for any changes in conditions since the original completion, including any physical changes to the site, changes in standards or regulations, etc. A contract for engineering services was awarded in the fall of 2025 to provide these services.</p>	
				<p>Construction of Phase 1 was completed in 2015 and included construction of the Cedar Heights booster pumping station on College Drive, as well as the installation of sewer and water and a pathway on College Drive. Phase 2 was completed in 2020 and included continuation of the sewer and water installation as well as a standpipe on Larocque Road.</p>

<b>Description</b>				<b>Comments</b>			
The project involves the engineering and construction services for the replacement of 100mm watermain in various locations of the downtown area, including 100mm watermain on Wyld Street, Worthington Street, Sherbrooke Street, and Second Avenue.				Historically, 100mm watermain have been problematic due to build-up of tubercles and other corrosion deposits inside the mains, leading to significant reduction in flow capacity. Additionally, a Fire Underwriter's Survey identified an excessive amount of 100mm watermain within the city, resulting in a negative impact on the City's overall scoring. Replacement of the 100mm watermain will mitigate risk due to reduced fire flows and will address the Fire Underwriter's Survey concerns.			
Engineering services will include preliminary design, detailed design, agency approvals, contract drawings, specifications, tendering and construction technical assistance. In addition to the watermain replacement, the construction works will also include restoration of the disturbed surface areas, including road base aggregates, asphalt, curb, gutter, grass boulevard and grassed ditches.				The project will be constructed in one phase.

<b>Description</b>				<b>Comments</b>			
The project involves the engineering and construction services for the replacement of 100mm watermain in various locations of the downtown area, including 100mm watermain on Wyld Street, Worthington Street, Sherbrooke Street, and Second Avenue.				Historically, 100mm watermain have been problematic due to build-up of tubercles and other corrosion deposits inside the mains, leading to significant reduction in flow capacity. Additionally, a Fire Underwriter's Survey identified an excessive amount of 100mm watermain within the city, resulting in a negative impact on the City's overall scoring. Replacement of the 100mm watermain will mitigate risk due to reduced fire flows and will address the Fire Underwriter's Survey concerns.			
Engineering services will include preliminary design, detailed design, agency approvals, contract drawings, specifications, tendering and construction technical assistance. In addition to the watermain replacement, the construction works will also include restoration of the disturbed surface areas, including road base aggregates, asphalt, curb, gutter, grass boulevard and grassed ditches.				The project will be constructed in one phase.

Description				Comments		
<p>One of the City's strategic priorities is to strengthen service delivery and operational performance through modern, consolidated technology.</p> <p>In support of this direction, the Enterprise Resource Planning (ERP) program aims to implement an integrated system that streamlines core administrative and service functions, improves data quality, and enables more efficient and consistent business processes across the organization.</p> <p>The City's current ERP platform has been in place for more than two decades and no longer meets contemporary requirements for integration, reporting, workflow automation, or ease of use. As a result, many business areas continue to rely on manual workarounds, standalone tools, and duplicate data entry, which limits efficiency and increases operational risk.</p>				A comprehensive needs assessment confirmed that the existing system does not deliver the expected benefits of a modern ERP.		
				The findings highlight the need for a coordinated, organization-wide approach to modernization, supported by the appropriate financial, human resource and staffing resources to ensure a successful transition.		
				An integrated ERP strategy offers clear advantages including, improved process alignment, stronger reporting capabilities, and a reduction in complexity and duplicated effort.		
				Related project includes 3912WS.

<b>Description</b>		<b>Comments</b>		
This project provides for the environmental assessment and analysis to extend the lifecycle of the existing Merrick Landfill site.		The existing footprint for waste disposal at the Merrick Landfill site is expected to be full (approximately) by the year 2036. It typically takes 10 to 15 years in order to get approval for expansion on an existing landfill site. This project provides for the environmental assessment and analysis to extend the lifecycle of the existing Merrick Landfill site.  Funding from Merrick Landfill Reserve (99515R) will be utilized.

<b>Description</b>		<b>Comments</b>	
<p>The project involves the engineering design and construction services for a second trunk watermain feed to the Ellendale Reservoir.</p> <p>Engineering services will include preliminary design, detailed design, agency approvals, contract drawings, specifications, tendering and construction.</p>		<p>The Ellendale Reservoir is currently fed through a single 750 mm trunk watermain from Ski Club Road along Olympia Court and through an easement to the reservoir. A redundant feed is required to minimize the potential for serious long duration water supply interruptions to the Airport Heights area as a result of a break in the single feed line. Project 4102WS addresses the single feed from the Ellendale Pumping Station to Airport Hill.</p> <p>Related Project includes 3931RD and 4102RD/WS.</p>

<b>Description</b>			<b>Comments</b>		
The project involves the engineering and construction services for upgrading the existing sanitary sewer and watermain as well as replacement of the storm sewer system. Road and boulevard surface restoration will also be required for the areas disturbed during construction. Restoration will include the road base aggregates, asphalt, curb, gutters, grass boulevard and concrete sidewalks.			The existing sanitary sewer is undersized resulting in insufficient capacity to receive flows from the sanitary pumping station on Premier Road - this leads to backups and overflows in the system. The recent installation of a trunk sewer on Birchs Road helped alleviate the problem but did not fully address it.		
Engineering services will include preliminary evaluation and design, detailed design, agency approvals, contract drawings, specifications, and construction technical assistance.			The watermain along this section of the roadway is 100mm, which will need to be upsized. The storm sewer has reached the end of its useful life and requires replacement.		
			The construction will be carried out in two phases. The first phase will be from Birchs Road to Premier Road. The second phase will be from Jessups Creek to Birchs Road.

<b>Title:</b>	Olmsted Beach - Boat Launch Replacement	<b>Project Stage:</b>	Committee of Council Review
<b>Asset Type:</b>	Asset Improvement and Maintenance (General)	<b>Strategic Plans:</b>	Infrastructure / Sustainability, Maintenance
<b>Division:</b>	Capital - Community Services	<b>Project Type:</b>	PARKS
<b>Budget Year:</b>	2026	<b>Active:</b>	Yes

Description				Comments			
This project provides for the design and construction to replace the Olmsted boat launch.				The boat launch at Olmsted Beach (Armstrong Park) has reached the end of its expected service life. Repairs undertaken to date have been temporary in nature. The boat launch provides an important public access to Trout Lake for boaters.			
				Not undertaking the redevelopment will result in the eventual closing of the access due to public safety concerns.			
				The boat launch is located on Ministry of Natural Resources (MNR) property. The City has a long-standing agreement with the MNR to use this property. This property is included in the Algonquin Land Claim with the province. The project is currently planned to proceed to construction in 2028 with MNR/IO approvals.

<b>Division:</b>	Capital - Infrastructure & Operations	<b>Project Type:</b>	ROADS
<b>Budget Year:</b>	2026	<b>Active:</b>	Yes

<b>Description</b>				<b>Comments</b>	
The project involves the engineering and construction services to widen Pinewood Park Drive from Lakeshore Drive to Decaire Road. Engineering services will include preliminary evaluation and design, detailed design, agency approvals, contract drawings, specifications, tendering and construction technical assistance.				The project was included in the preparation of a municipal class environmental assessment for the Lakeshore Drive and Pinewood Park corridors under Project 3715RD - Pinewood Park & Lakeshore Drive Intersection Reconstruction.	
Road works include the road base aggregates, asphalt, and grass boulevard.				As the Pinewood Park corridor continues to develop, increased traffic will necessitate additional lanes. The environmental assessment determined that ultimately a 5 lane road cross-section will be required. Current traffic volumes may not warrant full widening to 5 lanes. An interim option to splice on one lane and create a continuous centre left turn lane has been budgeted for this project.	
				Related projects include 3715RD.

<b>Description</b>		<b>Comments</b>	
This project is to address rehabilitation costs to the public works buildings at the Franklin site in order to meet operational needs.		<p>In 2026, a condition assessment will be completed for all public works buildings at the Franklin site. The condition assessments will be used to enhance the Asset Management plan by updating the current state of the assets and providing the data needed to make informed decisions about maintaining, repairing, or replacing assets.</p> <p>Based on the condition assessments performed, addressing immediate requirements, planning, engineering, and potential architectural design would be initiated in 2029.</p> <p>Through this planning process, it is anticipated that significant upgrades or re-configuration to current facilities or an addition of facilities will be completed in 2030 in order to meet operational needs.</p>

Description				Comments	
<p>The project involves the engineering and construction services for reconstruction of above ground and underground infrastructure and to upgrade O'Brien Street to a proper collector standard from Cassells Street to Ski Club Road.</p> <p>Engineering services will include an environmental assessment (EA), preliminary and detailed design, agency approvals, contract drawings, specifications, tendering and construction technical assistance. Road works include the road base aggregates, asphalt, curb, gutter, grass boulevard and concrete sidewalk. Underground works will include the installation of storm sewers and repair/ rehabilitation/ replacement of sanitary sewers and watermain.</p>				<p>O'Brien Street was originally constructed as a semi-urban collector (i.e., ditches were constructed for drainage). The City Capital Works Program has targeted upgrading of the City's arterial roads as a primary objective. As most of the arterial routes have been addressed, the collector and bus routes are the secondary priority to be addressed.</p> <p>O'Brien Street is a primary collector route between Cassells Street and Airport Road. Over the years some ditches have filled in, resulting in poor surface drainage and improper road base drainage. Drainage improvement will result in a pavement structure with a longer life. The work will be constructed in several phases.</p> <p>Related projects include 4032ST/SS/WS and 4344RD/SS/ST/WS</p>

<b>Description</b>			<b>Comments</b>		
The project involves the engineering services for the condition inspection of the City's roadway network. Condition inspections were previously undertaken on a four/five-year cycle (2007, 2011, 2015, 2021, and 2026) .			The information gathered from the road condition inspections is used in the City's Pavement Management System software to model and analyze the needs and most cost-effective treatments to maintain, rehabilitate, or replace the pavement structure of the City's road network. In accordance with the City's Asset Management Plan, the condition of the City's road network will be monitored and analyzed on an on-going basis to determine and confirm prioritization with respect to the condition assessment and needs of the overall road and infrastructure network.  In order to ensure the most cost-effective resurfacing program, regular updates of the road network condition data are required to ensure accurate and defensible needs assessments and work prioritization.  This project aims to enhance the City's Asset Management Plan by providing accurate and up-to-date condition data for the road network.

Description				Comments	
<p>The project involves the engineering and construction services for upsizing a portion of the Sage trunk sanitary sewer system.</p> <p>Engineering services will include preliminary design, detailed design, agency approvals, contract drawings, specifications, tendering, and construction technical assistance.</p>				<p>The undersized section runs from the intersection of K&amp;K Drive and Wallace, through an easement on the old Arclin Canada property, under the ONR train tracks and through an easement between two residential properties on Perut Place.</p> <p>Given the constraints of working in easements on private properties, including very close proximity to two residential houses, different alternatives will be generated to solve the capacity issues. The alternatives could include a new sewer on a new alignment or the use of trenchless technologies to upsize the existing pipe.</p> <p>The 2008 Infrastructure Background Study that was prepared in support of the Official Plan update identified that this section of the Sage Road trunk is currently undersized and during peak flows the pipe capacity will be exceeded. Any additional development served by the Sage trunk will only make the capacity issues worse. The engineering study will look at different alternatives to address the capacity issues.</p>

<b>Budget Year:</b>	2026	<b>Active:</b>	Yes

<b>Description</b>			<b>Comments</b>	
The project involves the engineering and construction services for a new trunk watermain that will provide a duplicate feed from the Ellendale booster pumping station to the Airport Hill distribution system.			The Ellendale site is comprised of two facilities. The reservoir provides a water storage facility for water supplied directly from the Water Treatment Plant. Water from the reservoir supplies Zone 1 as well as the Ellendale booster pumping station (BPS). The BPS provides water to the Airport Hill area. Both the feed to the reservoir, as well as the discharge pipe from the BPS is a single feed. There is a risk that a single point failure on either of these feeds would lead to disruptions in the water distribution system.	
Engineering services will include survey, design, contract drawings, specifications, tendering, construction inspection, contract administration, and project management.			This project will look at different alignments to provide a second feed to the Airport Hill area, including Ellendale Drive to Airport Road.	
			Related projects include 3931RD/WS & 4102WS

<b>Description</b>		<b>Comments</b>	
<p>The project involves the engineering and construction to align the two Laurentian Ave. side street approaches that intersect with Trout Lake Road.</p> <p>Engineering services will include survey, design, contract drawings, specifications, tendering, construction inspection, contract administration, and project management.</p>		<p>Trout Lake Road is an arterial road with Laurentian Ave. as a side street. The two Laurentian Ave. approaches are offset from each other by approximately 30 metres, creating a non-standard intersection and traffic signal configuration. The City's Road Safety Strategy identified this intersection as a priority intersection for safety issues to be addressed in terms of pedestrians, cyclists, and aggressive driving. Alignment of the side street approaches will improve driver expectation, safety, and traffic signal operations.</p>

<b>Division:</b>	Capital - Community Services	<b>Project Type:</b>	RECREATION FACILITY
<b>Budget Year:</b>	2026	<b>Active:</b>	Yes

<b>Description</b>		<b>Comments</b>		
This project provides for the replacement of the roof over the west concourse and the east concourse/ change rooms at Memorial Gardens.		The roof identified in this project is anticipated to be reaching the end of its expected service life in 2031. In 2030, a detailed assessment will be conducted to confirm the proper scope of work followed by a detailed design for the replacement. In 2031, it is anticipated construction work will be tendered and completed if the 2030 assessment confirms it is due.  The scope includes full replacement of the, approximately, 20,000 sq.ft roof system less decking (membrane, insulation, coverboard and removal of existing).

<b>Description</b>		<b>Comments</b>		
The project consists of upsizing the existing sanitary sewer on Francis Street and restoration of the roadway.  Engineering services will include flow monitoring, condition inspection, preliminary design, detailed design, agency approvals, contract drawings, specifications, tendering and construction.		Due to future development of Airport Hill and the Aerospace Business Park, it has been identified that the existing sanitary sewer on Francis Street from Surrey Drive to Greenhill Avenue and on Greenhill Avenue from Francis Street to Tower Drive is undersized. Upsizing of the sanitary sewer is therefore required. Storm sewers, curbs and gutters will be contemplated in the future to bring this roadway up to an urban residential standard. The watermain condition will also be evaluated to determine if it needs to be replaced.  Related projects include 4124ST/SS/WS

Description				Comments	
<p>The project involves the engineering and construction services for upgrading the existing 100mm distribution watermain, adding a new 400mm transmission watermain, and adding a new 500mm forcemain to twin the existing Marshall sanitary pumping station forcemain. An environmental assessment will also be conducted to look at road upgrades.</p>				<p>Watermain service along the entire Lakeshore Drive corridor is severely undersized and a new trunk watermain is required to provide adequate water supply. This work was first identified in 1977 and was targeted for construction at the time of reconstruction needs of the road surface to maximize the value of the road asset.</p>	
				<p>In 2003, efforts for the watermain construction commenced; however, the project was postponed due to funding constraints. Since then, the road surface has been rehabilitated through the resurfacing program to extend the life of the existing pavement.</p>	
				<p>The need was more recently confirmed again in the 2008 Infrastructure Background Study that was prepared in support of the Official Plan update. Installation of a trunk watermain from Judge Avenue to Sunset Boulevard will be carried out over two phases - Phase 1 will include Judge Avenue to Gertrude Street, and Phase 2 will include Gertrude Street to Marshall Avenue. Additionally, watermain upsizing from Marshall to Birchs is currently being constructed in stages by the Public Works Department.</p>	
				<p>The Marshall sanitary pumping station currently has no outlet in proximity to the station to relieve flow in the event of an emergency at the pumping station or a downstream break on the forcemain. During these emergency situations, sewage flows may back up into upstream buildings. A new forcemain to twin the existing forcemain will provide redundancy in the system to mitigate the risks of these emergency situations.</p>

<b>Description</b>			<b>Comments</b>		
This project is to capture all costs associated with PFAS remediation.			This project covers the costs associated with the remediation of per- and polyfluoroalkyl substances (PFAS) contamination on airport lands. The remediation activities are necessary to address environmental and public health concerns related to PFAS presence in soil and groundwater.  As per the agreement with the Department of National Defence, 97% of the project costs will be funded by the Department of National Defence, while the remaining 3% will be contributed by the City. This collaboration ensures compliance with environmental regulations and supports the restoration of affected lands for safe and sustainable use.

<b>Description</b>	<b>Comments</b>																				
This project is to provide funds for the construction of a parking structure to meet the needs for parking spaces in the downtown.	<p>The downtown development potential is limited if steps are not taken to provide parking spaces. Project specifics on location and type of facility have not been developed. The budget assumes 100 parking spaces in the new structure. Timelines will be updated based upon results of facility condition assessment currently underway. This project is related to 3405PK as potential locations may be acquired for construction.</p> <p>This project will be informed by 6796PK, in which a parking structure condition assessment is currently underway, and 3822PK, in which a parking study is being undertaken in 2026.</p> <p>Detailed needs would be supported by the parking strategy study that would include occupancy and inventory levels.</p> <p>Related projects include 3405PK</p>

<b>Description</b>		<b>Comments</b>	
The program provides for the design and construction of landfill cells for the effective leachate management as required by the Merrick Landfill Certificate of Approval. It includes the capping and closing of the preceding landfill cells and lining of future landfill cells as well as the construction and expansion of a leachate collection, pumping and infiltration and control systems.		The project is necessary to manage untreated leachate quantities in compliance with the Landfill's Certificate of Approval and prior to leachate treatment. Cell closing and expansion occurs approximately every 4-5 years.  2026 funds will be used towards closing the existing cell and opening a new cell  Project is partially funded by the Merrick Landfill Reserve (99515R).  Related projects include 3830GD.

<b>Description</b>		<b>Comments</b>		
This project will look at ways to address the impacts of climate change and reduce its effects within the City, including the impacts to people, the environment, and infrastructure.		During 2018 to 2020 the City participated in the Northern Climate Change Network through a program led by the Climate Risk Institute. The program facilitated a Climate Change Risk Assessment for North Bay. This project will continue building on that assessment to identify future needs and projects associated with climate change, including the development of a Climate Change Master Plan. In 2031, the implementation of the action plan will start.  This project directly supports the initiatives outlined in the Asset Management Plan by implementing actions that improve asset performance, reliability, and sustainability.

<b>Asset Type:</b>	Growth (General)	<b>Strategic Plans:</b>	Growth / Economic Development
<b>Division:</b>	Capital - Infrastructure & Operations	<b>Project Type:</b>	ROADS
<b>Budget Year:</b>	2026	<b>Active:</b>	Yes

Description				Comments	
<p>This project involves the engineering and construction services for a new rural roadway from the west end of Four Mile Lake Road to Marsh Drive and possible upgrades on Marsh Drive to Highway 11; including, any required improvements to Highway 11 and the Marsh Drive intersection.</p> <p>The road will be constructed as a truck route to service existing industrial properties and new industrial developments in the airport area. An environmental assessment (EA) was previously completed using in-house Engineering staff. Future engineering services will include an update to the EA, preliminary and detailed design, agency approvals, contract drawings, specifications, tendering and construction technical assistance.</p>				The project's priority is related to development and further expansion of the Aerospace Industrial Park.	
				<p>The project would also address some safety concerns. Truck traffic to Highway 11/17 is currently serviced by Airport Road and O'Brien Street. Thibeault Hill on Highway 11 has a truck arrestor bed and Airport Hill does not. Removing truck traffic from Airport Hill and redirecting it to Thibeault Hill would reduce the risk of runaway trucks. Re-routing truck traffic would also extend the life of Airport Road and O'Brien Street between Airport Road and Highway 11/17.</p> <p>Related projects include 4300RD/SS/ST/WS</p>

<b>Description</b>		<b>Comments</b>	
This project provides for a complete renovation to the Customer Service Centre at City Hall to suit modern operational requirements.		The service delivery model for the Customer Service Centre (Centre) has evolved over the years and the existing space is no longer meeting the needs of the Centre. This project will rebuild the space to meet the modern service delivery model and modern accessible requirements of the AODA.

<b>Description</b>				<b>Comments</b>	
This project provides funds for an updated Waste Diversion Facility which will replace the current Organics Waste Drop-off and Hazardous Waste Depot.				The current Hazardous Waste and Organics drop off depot has been diverting waste from the Merrick landfill site for over 30 years and requires upgrades in order to accommodate an increase in resident participation. The new Facility will be safe, secure, accessible and able to adapt to the City's future waste diversion needs. The new Facility will include all current waste diversion programs as well as incorporate new ones.

<b>Description</b>				<b>Comments</b>	
This project provides for extensive structural repairs to the City's largest reservoir - Ellendale.				The Ellendale Reservoir is the City's largest water holding structure with a capacity just over 18,000m3. This reservoir was constructed approximately 50 years ago and has a concrete base, walls, roof, and columns.  An inspection of the reservoir was performed in 2021 which noted some immediate and future structural repair work. The immediate needs were dealt with in 2021 at the conclusion of the inspection. This project will address the remaining concrete structural repairs to the walls and columns in the Ellendale reservoir that were identified during the 2021 inspection.

<b>Budget Year:</b>	2026	<b>Active:</b>	Yes

<b>Description</b>		<b>Comments</b>	
<p>This project provides for the necessary infrastructure, technology, and equipment to facilitate the transition of the North Bay Transit Services fleet of vehicles from fossil fuels to alternate fuel sources to meet net zero emission targets. As the roadmap evolves the details of the project objectives and requirements will be established.</p>		<p>North Bay Transit currently operates 14 diesel fueled buses, a number of unleaded gas para-buses, and an unleaded gas support vehicle. Transit has the responsibility to reduce its carbon footprint and transition towards a net-zero carbon emissions fleet. The project will involve the purchase and installation of charging or refueling stations and facilitating infrastructure, and the replacement of fossil-fuel vehicles with zero-emission vehicles.</p> <p>The project will be phased over several years (est. 5-8 years) to transition the fleet of fossil fueled vehicles to zero-emission fleet. The project will focus on infrastructure, technology, and equipment to facilitate the transition of the Transit fleet of vehicles. The plan will be coordinated and aligned with the, yet to be formalized/determined, Transit Fleet transition to zero-emission vehicles.</p> <p>As of 2021, North Bay Transit is participating in a Provincial wide initiative to develop a roadmap towards transitioning from fossil fueled transit vehicles to zero emission fueled vehicles. As the roadmap evolves the details of the project objectives and requirements will become clearer.</p>

<b>Description</b>			<b>Comments</b>	
The project involves the engineering and construction services to improve the intersection configuration and intersection safety.			A traffic impact study completed for a redevelopment proposal of the former Trusler school property on Cartier identified that there are existing safety concerns with the intersection of Champlain and McKeown.	
Engineering services will include preliminary design, detailed design, agency approvals, contract drawings, specifications, tendering and construction technical assistance.			An update to the McKeown Avenue environmental assessment was started in 2022 for the City's project to widen McKeown from Gormanville to Cartier. When the safety concerns at the Champlain intersection were identified, the City's project was expanded to include an analysis and design of safety improvements for the intersection. The improvements that are identified will be constructed through this project.

Description				Comments			
<p>The project involves the engineering and construction services to improve the drainage in the alleyway between Main St and the McIntyre parking garage.</p> <p>Engineering services will include preliminary design, detailed design, agency approvals, contract drawings, specifications, tendering and construction technical assistance.</p>				<p>The Building Blocks group, comprised of Main West property owners, has provided a proposal to the City to revitalize the alleyway space to become an important activity and gathering place in the downtown that is strategically linked to the arts &amp; culture sector. The goal is to achieve their vision through a number of infrastructure and programing proposals. The group has identified drainage concerns within the alleyway. Potential drainage alternatives include regrading, repaving, and a new storm sewer system.</p>

<b>Description</b>			<b>Comments</b>		
The project involves the engineering and construction services for the complete reconstruction of the above-ground and underground infrastructure and to upgrade Jane Street to a proper collector standard from Timmins Street to Algonquin Avenue.			Jane Street was originally constructed as a semi-urban collector (included ditches). Jane Street is a primary collector route between Algonquin Avenue and Gormanville Road that also services hospital bound traffic. As part of the hospital servicing, Jane Street was reconstructed between Birchwood Road and Timmins Street in 2006 and between Gormanville Avenue and Birchwood Road in 2008.		
Engineering services will include preliminary design, detailed design, agency approvals, contract drawings, specifications, tendering and construction technical assistance.			This project was identified through the City's asset management software and is the remaining section of Jane Street that has not been reconstructed. The level of service improvement on this collector is desirable.

Description				Comments			
This project provides for the replacement of the heat exchanger and sludge transfer piping at the Wastewater Treatment Plant.				The North Bay Wastewater Treatment Plant treats all wastewater for the City of North Bay's municipal sewage collection system. The digested sludge process requires a heat exchange and hundreds of meters of sludge piping. The current heat exchanger and sludge transfer piping are nearing the end of their useful lives and will need to be replaced.

<b>Description</b>			<b>Comments</b>		
This project provides for the replacement of the blowers at the North Bay Wastewater Treatment Plant.			The North Bay Wastewater Treatment Plant treats all wastewater for the City of North Bay's municipal sewage collection system. The facility uses the conventional activated sludge process for wastewater treatment. This process requires blowers to feed oxygen into the aeration tanks. The current blowers are nearing the end of their useful lives and will be due for replacement in 2032.

Description				Comments	
This project is for the construction of new sidewalks to transit stops.				This project will construct new sidewalks to comply with the Municipal Right-of-Way for direct routing of pedestrians to transit stops (approximately 5.2km). This includes connecting existing sidewalks to permit a continuous pedestrian path to established transit stops.	
				Budget includes funding through the Investing in Canada Infrastructure Program.	
				Premier Road from the end of the existing sidewalk (Fowler) southerly to Champlain Park has reached Substantial Performance criteria. The remaining projects are being engineering designed over the winter and spring (2026) with tentative submission of final drawings and specifications by summer 2026. Next project will be tendered for construction start in 2027 as per the City's application.	
				Related projects include 4021TR, 4338TR, and 4515TR

<b>Description</b>				<b>Comments</b>			
This project provides for the funding to develop an action plan to determine arts and culture landscape for the City for the next 10 to 20 years.				This project will develop a comprehensive Arts and Culture Master Plan to map out the City’s cultural landscape and guide next steps over the next 10 to 20 years. In collaboration with the Capitol Centre, and Creative Industries, this initiative will foster a vision for cultural development, strengthen local identity, and position the City as a vibrant hub for creativity and innovation. The plan will include actionable recommendations that support economic development, tourism, and community engagement while celebrating diversity and heritage.

<b>Title:</b>	O'Brien Street - Ski Club to Airport & Ski Club Signals	<b>Project Stage:</b>	Committee of Council Review
<b>Asset Type:</b>	Asset Improvement and Maintenance (General)	<b>Strategic Plans:</b>	Infrastructure / Sustainability
<b>Division:</b>	Capital - Infrastructure & Operations	<b>Project Type:</b>	ROADS
<b>Budget Year:</b>	2026	<b>Active:</b>	Yes

Description				Comments	
<p>The project involves the engineering and construction services for the complete reconstruction of the roadway on O'Brien from Airport to Ski Club to improve the road to a current urban collector road standard, as well as installation of new traffic signals at the intersection of O'Brien and Ski Club. The capacity and condition of the existing underground infrastructure (storm, sanitary, and water) will be evaluated to determine if any work is required to repair, rehabilitate, or replace the infrastructure.</p> <p>Engineering services will include preliminary design, detailed design, agency approvals, contract drawings, specifications, tendering and construction.</p>				<p>The configuration of O'Brien from Airport to Ski Club does not meet current urban collector standards. The roadway and intersection at Ski Club has reached its capacity and requires upgrading to reduce congestion in the area. The Ski Club intersection is currently controlled by an all-way stop control - replacement of this control with traffic signals that are coordinated with the traffic signals at the Airport Road intersection will provide increased capacity. Upgrading the road to meet current urban collector standards, including the addition of curb and gutters and a proper drainage system will provide more traffic capacity and will improve the life expectancy of the pavement structure. The road was resurfaced in 2021 to provide a suitable driving surface in the interim.</p> <p>The complete replacement of the above-ground infrastructure provides the opportunity to repair, rehabilitate, or replace the underground infrastructure.</p> <p>Related projects include 4344ST/SS/WS and 4032RD/ST/SS/WS.</p>

Description				Comments			
<p>This project provides for the engineering and construction services to replace the King's Landing pumping station.</p> <p>Engineering services will include survey, design, contract drawings, specifications, tendering, construction inspection, contract administration, and project management.</p>				<p>The existing sanitary pumping station is located at the corner of Memorial Drive and the King's Landing access road. The pumping station is nearing the end of its useful life and requires replacement.</p> <p>The replacement of the King's Landing pumping station would service existing facilities draining to the pumping station and have capacity to service future development, including development at the former Kenroc site.</p>

<b>Description</b>		<b>Comments</b>	
This project will support the installation of new digital exterior displays at the Capitol Centre and Museum.		<p>The existing digital display located within the existing clock tower at the Museum has reached the end of it's service life. Parts are becoming hard to source making repair challenging. The digital display will be replaced within the existing clock tower and the clock will be replaced with a backlit analog clock. This work is expected to be completed in 2026.</p> <p>The existing digital display at the Capitol Centre is reaching the end of its useful life and would be replaced with a new modern sign appropriate for the size and scale of the building. This work is expected to be completed in 2026.</p>

Description				Comments			
The project provides for the design and construction of a permanent cricket field.				The City of North Bay does not have a dedicated cricket facility. Currently cricket is played where a field can be temporarily redeveloped for this purpose, however, this solution provides significant challenges based on the field size needs and increasing demands for fields.			
				Throughout 2023 staff have worked with local cricket enthusiasts to determine if an existing field location could be utilized or redeveloped as a new cricket location in the City and have developed concepts with high level cost estimates.			
				In 2025 the City worked to finalize a site specific location and cost estimate. Construction will begin in 2026 with an opening of spring 2027

<b>Description</b>				<b>Comments</b>			
This project provides funding to implement recommendations identified through the organizational review as approved and directed by Council.				KPMG was engaged in 2023 to conduct an organizational review for the City of North Bay. Their findings were presented to Council during a Special Committee Meeting on April 30, 2024.  Following KPMG's presentation, an implementation plan was developed based on the Top 6 Priorities identified by Council and staff from the recommendations within KPMG's report. The plan was approved by Council on October 29, 2024. The priorities focus on key goals, including improving effectiveness and efficiency, enhancing customer service, strengthening accountability and communication, and delivering greater value to taxpayers.  2026 includes the development of a workforce plan and ongoing implementation of recommendations from the customer-centered digital strategy, corporate-wide customer service strategy. Funding will also be used to support digitization and tools necessary to improve processes as identified through lean process reviews.

<b>Division:</b>	Capital - Infrastructure & Operations	<b>Project Type:</b>	ROADS
<b>Budget Year:</b>	2026	<b>Active:</b>	Yes

<b>Description</b>			<b>Comments</b>		
<p>The project involves the engineering and construction services for the complete reconstruction of the roadway and storm system on Kodiak. The capacity and condition of the remaining existing underground infrastructure (sanitary and water) will be evaluated to determine if any work is required to repair, rehabilitate, or replace the infrastructure.</p> <p>Engineering services will include pre-engineering (survey and geotechnical), preliminary design, detailed design, agency approvals, contract drawings, specifications, tendering and construction.</p>			<p>The above-ground infrastructure on Kodiak (pavement and curbs) has reached the end of its useful life and is no longer a candidate for rehabilitation treatments. A number of areas of the roadway have poor drainage resulting in curbs and pavement areas that have heaved or subsided. Additionally, sections of shallow storm sewer have repeatedly heaved and disturbed the pavement structure. Without correcting the drainage issues, rehabilitation of the road asphalt would only result in short-term benefits. To correct the drainage issues, the curb, gutter and storm sewer will need to be replaced. Additionally, the granular material in the road base has likely been compromised and in need of replacement.</p>

<b>Title:</b>	Marshall Bike Lanes	<b>Project Stage:</b>	Committee of Council Review
<b>Asset Type:</b>	Strategic Investment (General)	<b>Strategic Plans:</b>	Infrastructure / Sustainability
<b>Division:</b>	Capital - Infrastructure & Operations	<b>Project Type:</b>	ROADS
<b>Budget Year:</b>	2026	<b>Active:</b>	Yes

<b>Description</b>				<b>Comments</b>			
The project involves the engineering and construction services for creation of bike lanes on Marshall Avenue from Lakeshore Drive to Booth Road and the Kate Pace Way.				The City's Active Transportation Master Plan identified the need for a future multi-use asphalt trail along Marshall Avenue. Further examination of the existing conditions identified that as an interim solution, bike lanes could be implemented. The road width from Lakeshore Drive to Marshall Park Drive is wider than standard and can accommodate the addition of bike lanes without any additional construction. Also, sections of the roadway between Marshall Park Drive and Booth Road have an existing paved shoulder, which could be expanded to implement bike lanes along the entire roadway.

<b>Description</b>				<b>Comments</b>			
The project provides for the engineering services to prepare master drainage plans for the Cedar Heights and Airport Heights areas, in order to provide support for future development.				The Airport Heights and Cedar Heights areas are identified in the Official Plan as growth areas. The master drainage plans will look at stormwater management on a regional basis rather than on a piecemeal site-by-site basis and will support future growth as well as North Bay's assigned housing target.

Description			Comments		
This project provides for the replacement of the centrifuge at the Wastewater Treatment Plant (WWTP).			The WWTP has two centrifuges which dewater sludge prior to it being transported to the landfill. The centrifuge options is critical to the wastewater process. This project provides for the replacement of one of the centrifuges which will be at the end of its useful life.

<b>Description</b>				<b>Comments</b>			
This project provides for the upgrade of the Neptune water meter data collectors from R450 to an R900 system utilizing the LoRaWAN gateway to enhance communications between the water meters and the Neptune software. This project also provides for the replacement of the older retrofit, non-Neptune water meters that are approaching end of life.				The current Neptune water meter data collectors have reached the end of their useful life. This project will replace the current units with the updated model over the next couple of years. There are several older water meters that have reached the end of their useful lives.

Description	Comments
This project involves replacing aging servers across the City's main data center and disaster recovery site.	<p>The replacement of the City's aging server infrastructure is an essential upgrade to maintain system reliability, improve processing capabilities, and ensure compatibility with modern software and applications. The new servers will enhance performance and scalability to meet current and future operational demands.</p> <p>This project provides for sever replacements at the main data centre and the backup data centre (disaster recovery site). Each location has several pieces of equipment, including, servers, storage, switches, and firewalls, each with a 5-year life cycle. As each centre requires the replacement of several pieces of equipment, the refresh is staggered over consecutive years.</p> <p>The 2026 budget provides for the upgrade of the main data centre storage</p>

Scenario Description	Scenario Comments

<b>Description</b>	<b>Comments</b>																																
This project provides for the upgrade to the City's network infrastructure by replacing outdated switches and firewalls.	<p>Replacement of the City's core infrastructure including, switches and firewalls, is designed to significantly enhance overall system performance, ensuring that the City's network operates more efficiently and securely.</p> <p>By implementing state-of-the-art firewall technology, the speed and reliability of the network will not only be improved but it will also streamline critical processes such as Virtual Private Network (VPN) access and Multi-Factor Authentication (MFA). These improvements will facilitate a smoother and more secure remote access for users, ultimately enhancing productivity and user experience.</p>

<b>Description</b>			<b>Comments</b>		
This project provides for a needs assessment and installation of an updated fire suppression system for the main data centre.			The installation of a fire suppression system for the main data center will ensure that vital equipment and data is safeguarded against potential damage caused by a fire which ensures continuity of operations and minimizes system downtime.

<b>Description</b>		<b>Comments</b>	
This project will provide for the replacement of aging air conditioning units at the data center and disaster recovery site to ensure optimal environmental conditions for IT equipment.		The replacement of aging air conditioning units is essential for maintaining the integrity of IT infrastructure because reliable cooling is crucial to optimize equipment performance, to extend the useful life of critical equipment, to increase energy efficiencies, and to minimize the risk for equipment downtime due to overheating. A needs assessment will be completed in 2026 to inform the replacement strategy for 2027.

<b>Description</b>		<b>Comments</b>	
This project will provide for the upgrade to the City's SCADA network infrastructure by replacing outdated switches, servers, and firewalls.		This project involves the replacement of the wastewater network servers, storage, switches, and SCADA systems. This upgrade is designed to enhance overall system performance, ensuring that the network operates efficiently and securely. The new equipment will improve connectivity, boost network performance, and strengthen cybersecurity measures, ensuring the resilience of the City's IT infrastructure against emerging threats.	
		This project is funded by both water and wastewater user rates.

# 2026 CAPITAL BUDGET | Capital Project Information Sheets by Project Number

<b>Number:</b>	4499PD	<b>Scenario:</b>	Main
<b>Title:</b>	North Bay Police Service Headquarters Replacement	<b>Project Stage:</b>	Committee of Council Review
<b>Asset Type:</b>	Asset Improvement and Maintenance (General)	<b>Strategic Plans:</b>	Infrastructure / Sustainability
<b>Division:</b>	Capital - Service Partners	<b>Project Type:</b>	POLICE
<b>Budget Year:</b>	2026	<b>Active:</b>	Yes

Description				Comments		
This project provides for the replacement of the Police Service Headquarters as determined by the 2017 Condition Assessment identifying that the current building does not properly support police operations.				Since 2017, the Police Service has been advocating for the replacement of the current facility based on the 2017 Facility Condition Assessment completed that determined that the current facility is not suitable to meet the Police Service's on-going needs based on three (3) key factors: 1. The building is too small 2. The building's layout fails to meet best practices 3. The cost to rectify faults, address structural issues and upgrade building would be high and would cause considerable disruption in service.		
				Without expanding the building, renovations will only go a small way to improve working conditions.		
				In 2026, the Service is proposing to complete a Facility Assessment, to complete an organizational assessment and to complete a space needs assessment. These studies will support next steps for the replacement and/or expansion of the North Bay Police Service Headquarters facility.		
Scenario Description				Scenario Comments		
				The International Association of Chiefs of Police (ICAP) has published "Police Facilities Planning Guidelines" that outline the processes to follow when a Police Service needs a new or renovated facility. The steps included in the document support the projected budget for 2027-2035: 2028 Engage Community and Stakeholders, tour other police facilities and develop project budget 2029 Secure and purchase site, including legal and geotechnical testing 2030 Hire architect and begin design of facility 2032 Tender and site preparation 2033-2034 Construction, furnishing and equipment 2035 Occupancy

<b>Budget Year:</b>	2026	<b>Active:</b>	Yes

Description			Comments	
<p>This project provides for the engineering services for the preparation and maintenance of infrastructure models for the City's underground infrastructure. Also included in the project is an update to the 2008 Infrastructure Background Study, as well as the analysis of the City's stormwater infrastructure and major storm water flow routes (i.e., when the sewers are full during larger rain events) leading to the identification of overland flow route needs.</p>			<p>This project will establish computer models of the underground infrastructure in the City; which includes, the storm sewer , sanitary sewer, and watermain infrastructure.</p> <p>Infrastructure models can be used to analyze the capacity of the existing systems, and identify potential existing capacity issues. They can also be used for planning to analyze the impacts and feasibility of expanding the system in response to specific developments or citywide development scenarios, such as the impact of the City's Additional Dwelling Units policy. The models will be utilized to complete an update to the 2008 Infrastructure Background Study that was completed in support of the Official Plan update. The 2008 study focused just on the trunk sewers and mains using a spreadsheet type of analysis. The new infrastructure models will allows analyses to be carried out on all pipes in the pipe networks, providing the capacity to identify potential issues on a more micro level.</p> <p>Once these models are established, they will need to be maintained on a regular basis for changes in the systems and will also be used for analysis of various scenarios such as new developments or other capital projects. This work will be carried out through the Infrastructure Modelling On-going capital project.</p> <p>The City's storm sewer systems (the minor system) are only designed to capture runoff from certain sized storms (one that statistically occurs once every five years). During intense rain events, the system's capacity can be exceeded and once the sewer systems are full of water any additional runoff must flow overland (the major system). If the overland flow routes are designed properly, localized flooding can be mitigated. A city-wide study will help to identify other under-designed areas and to prioritize areas with the greatest risk potential for flooding and damage.</p> <p>This project directly supports the initiatives outlined in the Asset Management Plan by implementing actions that improve asset performance, reliability, and sustainability.</p> <p>Related projects include 4512SS/WS, 6859SS/ST/WS</p>

<b>Title:</b>	North Bay Police Service Radio System Replacement	<b>Project Stage:</b>	Committee of Council Review
<b>Asset Type:</b>	Asset Improvement and Maintenance (General)	<b>Strategic Plans:</b>	Technology, Equipment Replacement
<b>Division:</b>	Capital - Service Partners	<b>Project Type:</b>	POLICE
<b>Budget Year:</b>	2026	<b>Active:</b>	Yes

<b>Description</b>			<b>Comments</b>	
The police service radio system is a critical component of law enforcement operations, enabling seamless communication between officers in the field, command centers, and emergency services. Currently, the system is reaching the end of its useful life, resulting in increased maintenance costs, and decreased reliability. The average lifecycle of a radio system is 5-7 years.			The existing police radio system has been in service for several years and is now approaching or has reached its end of life. Key challenges include, aging infrastructure, limited coverage, and high maintenance costs. A new modern radio system is essential to improve reliability and coverage, enhance communication efficiency, ensure compliance with standards, and increase cost-effectiveness.  Replacing the outdated police radio system is essential for maintaining public safety, operational efficiency, and officer security. The new system will not only enhance communication capabilities but also deliver long-term cost savings and improve overall service delivery.

<b>Description</b>		<b>Comments</b>	
The purpose of this project is to replace the heating and HVAC equipment at fire station 1; including, three boilers, three HVAC units, and one AC unit.		The current heating, air handling, and air conditioning equipment is original to the fire station (1999). The recommended useful life for this equipment is 20 years. As a result of the regimented and proper maintenance program followed, this equipment has exceeded its life expectancy and is expected to need replacement in 2026.

<b>Division:</b>	Capital - Infrastructure & Operations	<b>Project Type:</b>	STORM SEWER
<b>Budget Year:</b>	2026	<b>Active:</b>	Yes

Description				Comments	
<p>The project involves the engineering and construction services to construct a stormwater management (SWM) pond approximately 350 meters east of O'Brien Street and 150 meters north of Airport Road and to construct a drainage channel and recreational pathway/ maintenance road from Kenwood Hills Drive to the pond.</p> <p>For new development on the north side of Airport Road, the pond will provide quantity control to mitigate flooding impacts in Chippewa Creek. The pond will also provide quality control to mitigate sedimentation into the creek for a significant portion of the existing and future development in the Airport Heights area.</p>				<p>A contract for engineering services was awarded to an engineering consultant in 2009 which included an environmental assessment (EA), preliminary and detailed design, agency approvals, contract drawings, specifications, tendering and construction technical assistance.</p> <p>The Chippewa Creek Watershed Study identified that future development in the Airport Heights area would require quantity and quality control. The Highland Woods development was allowed to proceed based on the SWM requirements being met by the construction of this SWM pond. The SWM pond, channel, and recreational pathway/ maintenance road will be constructed in one phase.</p> <p>Project 4362ST-Airport Heights &amp; Cedar Heights Master Drainage Plans and Implementation will be completed in 2026 and will inform this project with respect to any additional requirements or modifications.</p> <p>Related projects include 4362ST</p>

<b>Division:</b>	Capital - Infrastructure & Operations	<b>Project Type:</b>	ROADS
<b>Budget Year:</b>	2026	<b>Active:</b>	Yes

<b>Description</b>			<b>Comments</b>	
<p>The project involves the engineering and construction services for the complete reconstruction of the roadway and storm system on Charlton Crescent. The capacity and condition of the remaining existing underground infrastructure (sanitary and water) will be evaluated to determine if any work is required to repair, rehabilitate, or replace the infrastructure.</p> <p>Engineering services will include pre-engineering (survey and geotechnical), preliminary design, detailed design, agency approvals, contract drawings, specifications, tendering and construction.</p>			<p>The storm sewer system on Charlton, including the rear-lot storm sewer system, is shallow and flat, and does not function well, resulting in occasional flooding. Additionally, the above-ground infrastructure (pavement and curbs) has reached the end of its useful life and is no longer a candidate for rehabilitation treatments. A number of areas of the roadway have poor drainage resulting in curbs and pavement areas that have heaved or subsided. Without correcting the drainage issues, rehabilitation of the road asphalt would only result in short-term benefits. To correct the drainage issues, the curb, gutter and storm sewer will need to be replaced. Additionally, the granular material in the road base has likely been compromised and is in need of replacement.</p> <p>The complete replacement of the above-ground infrastructure provides the opportunity to repair, rehabilitate, or replace the underground infrastructure.</p> <p>Related projects include 4520ST</p>

<b>Title:</b>	Ivanhoe Storm Outlet Upsizing	<b>Project Stage:</b>	Committee of Council Review
<b>Asset Type:</b>	Asset Improvement and Maintenance (General)	<b>Strategic Plans:</b>	Infrastructure / Sustainability, Maintenance
<b>Division:</b>	Capital - Infrastructure & Operations	<b>Project Type:</b>	STORM SEWER
<b>Budget Year:</b>	2026	<b>Active:</b>	Yes

<b>Description</b>		<b>Comments</b>	
<p>This project provides for the engineering and construction services for the upsizing of the storm outlet pipe and outfall for the storm sewer system on Ivanhoe Drive.</p> <p>Engineering services include pre-engineering (survey and geotechnical), preliminary design, detailed design, agency approvals, contract drawings, specifications, tendering, and construction.</p>		<p>During the 2022/23 reconstruction of Ivanhoe, the storm outlet pipe was rehabilitated by sliplining a new pipe inside the existing corrugated steel pipe, which provided sufficient capacity for current needs. It is anticipated that the future drainage area contributing to this storm system may increase as adjacent streets are reconstructed. This may increase the storm outlet capacity needs, and as a result, the outlet will need to be upsized.</p>

<b>Division:</b>	Capital - Water	<b>Project Type:</b>	WATER
<b>Budget Year:</b>	2026	<b>Active:</b>	Yes

<b>Description</b>		<b>Comments</b>	
This project provides for the replacement of the high lift pumps at the Water Treatment Plant.		The Water Treatment Plant has five 350HP high lift pumps which push drinking water into the City's water distribution system. The pumps were installed in 2010 and have a useful life of 20 years. This project will ensure these critical pumps/ motors and drives are replaced at the end of their life.

# 2026 CAPITAL BUDGET | Capital Project Information Sheets by Project Number

<b>Number:</b>	6013RD	<b>Scenario:</b>	Main
<b>Title:</b>	City Share of Development Costs 2026 On-going	<b>Project Stage:</b>	Committee of Council Review
<b>Asset Type:</b>	Growth (General)	<b>Strategic Plans:</b>	Growth / Economic Development
<b>Division:</b>	Capital - Infrastructure & Operations	<b>Project Type:</b>	ROADS
<b>Budget Year:</b>	2026	<b>Active:</b>	Yes

<b>Description</b>		<b>Comments</b>	
This project provides a funding source to enable the City to respond to development requests. The City contributes towards items such as infrastructure upsizing and extensions, as well as off-site road network improvements.		These works are considered a priority and are vital to the City's support of development and growth, as well as North Bay's assigned housing target.  The budgeted amounts represent an allowance for unknown and unforeseen costs for roadway and underground infrastructure works related to new development and typically are for incremental costs for upsizing infrastructure. This could include a requirement by the City for a new subdivision road to be a collector standard, or a sewer to be upsized to a trunk sewer diameter. Current practice is that the developer would only be responsible to cover the costs to meet the minimum standard and the City would cover the additional cost to upgrade to a higher standard.  These projects generally provide for future growth.  Related projects include 6013SS/ST/WS	
<b>Scenario Description</b>		<b>Scenario Comments</b>	
		The following details support the Capital Forecast for 2027 to 2035:  Continue to plan for future servicing needs as subdivision development proceeds. The predominant development areas likely requiring future upsizing needs are the Airport Heights and Cedar Heights areas.

Description	Comments
<p>This project provides for the engineering and construction services for the annual resurfacing program.</p> <p>Engineering services will include survey, design, contract drawings, specifications, tendering, construction inspection, contract administration, and project management.</p> <p>The project is an on-going annual program to maintain and/or restore the riding surface of the urban city streets. The project utilizes a variety of techniques for maintenance of the roadway and protection of the asset. Works may involve asphalt grinding, pulverization, recycling, crack sealing, base stabilization, drainage improvements, curb restoration and boulevard restoration in addition to cold-in-place or hot-mix asphalt paving.</p>	<p>The maintenance of the road surface is of primary importance to the community. The annual program extends the life of roads, reduces annual maintenance costs, and provides a continued level of service.</p> <p>In accordance with the City's Asset Management Plan, the condition of the City's roads will be monitored and analyzed on an on-going basis to determine and confirm prioritization with respect to the needs of the overall road and infrastructure network, and which works represent the best value. To assist with the prioritization, the City's Pavement Management Software and the results of the Road Condition Assessment performed in 2021 will be utilized. The Road Condition Assessment is being updated in 2026.</p> <p>The project is partially funded using the Canada Community - Building Fund (Formerly the Federal Gas Tax Fund).</p> <p>This project directly supports the initiatives outlined in the Asset Management Plan by implementing actions that improve asset performance, reliability, and sustainability.</p>

<b>Description</b>				<b>Comments</b>			
This project provides for an on-going capital program that is designed to provide for replacement and rehabilitation of culverts located along rural roadways where no other drainage system is in place. It is essential for maintaining and extending the life cycle of our rural roadways. The project also works in conjunction with the rural road rehabilitation program.				The 2026 program will replace a large diameter culvert on Northshore Rd. Other locations are Peninsula Rd, Carmichael Dr.			
				This project directly supports the initiatives outlined in the Asset Management Plan by implementing actions that improve asset performance, reliability, and sustainability.

Description				Comments			
This project provides for an on-going capital program that performs an annual survey of all the City's sidewalks to identify deficiencies as outlined under the Minimum Maintenance Standards of Ontario. Project funds are also used to conduct sidewalk replacement of sections identified in the annual survey and/or patch smaller sections.				The 2026 program will provide for sidewalk replacements as determined by a survey in the spring based on need, risk, priority, and asset management proposed works.  This project directly supports the initiatives outlined in the Asset Management Plan by implementing actions that improve asset performance, reliability, and sustainability.

Description				Comments			
This program provides for bridge related rehabilitation repairs for minor deficiencies in the City's bridges, pedestrian bridges, and major culverts to capture additional life expectancy and maintain service to the public. There are currently more than 100 structures being maintained through this funding.				These works are considered a critical priority in order to provide safety to the public which can include the rehabilitation of certain components of the bridge or its surroundings to extend its service life; such as, concrete patch repairs, guide rail repairs, asphalt, and sidewalk repairs, etc.			
				This project also involves the annual bridge inspection program. Municipalities are regulated to inspect every bridge structure once every two years. The City contracts out these services to an engineering firm that will do the inspections and provide a report of the findings and recommendations for work, as well as identifying any critical issues warranting immediate attention.			
				This project directly supports the initiatives outlined in the Asset Management Plan by implementing actions that improve asset performance, reliability, and sustainability.

Description	Comments
This project provides support for the redevelopment of Cassellholme East Nipissing District Home for the Aged and the proposal for the Board of Management to borrow the funds necessary to complete the project.	Cassellholme will be financing the redevelopment using a combination of capital subsidy payments by the Ministry of Health and Long-Term Care and annual levy to the participating municipalities. This project represents the City of North Bay's estimated share of the redevelopment and is subject to change based on the start date, Ministry's approvals, and final financing agreements.

<b>Description</b>	<b>Comments</b>
This project provides for the rehabilitation to the waterfront park land. The program includes the rehabilitation of turf, trees, beaches, trails, walkways, furnishings, lighting, the bench program, and parking lots.	In 2026, this budget is going towards the refurbishment of the Kiwanis Bandshell. Work will include repairing the failing paint, lighting, removal of outdated infrastructure and any other identified work. Additionally, this budget will be used for general rehabilitation of the Waterfront assets.

# 2026 CAPITAL BUDGET | Capital Project Information Sheets by Project Number

<b>Number:</b>	6664SS	<b>Scenario:</b>	Main
<b>Title:</b>	Sewage Lift Stations 2026 On-going	<b>Project Stage:</b>	Committee of Council Review
<b>Asset Type:</b>	Asset Improvement and Maintenance (Water and Wastewater)	<b>Strategic Plans:</b>	Infrastructure / Sustainability, Maintenance,...
<b>Division:</b>	Capital - Sewer	<b>Project Type:</b>	SANITARY SEWER
<b>Budget Year:</b>	2026	<b>Active:</b>	Yes

Description	Comments
This project provides for an on-going program for emergency repairs and replacements at the sewage lift stations. Minor improvements to systems are also funded from this project.	The City owns and operates 19 sewage lift stations. Annually it is not uncommon to experience failures in pumps, generators or other critical appurtenances that are not budgeted for with operational dollars. This project is used to cover such emergency failures. Upgrades at Chapais and Mash Lift Station are scheduled for 2026.

Scenario Description	Scenario Comments
	The following details support the Capital Forecast for 2027 to 2035: This project is used to cover such emergency failures in pumps, generators or other critical appurtenances that are not budgeted for with operational dollars.

<b>Asset Type:</b>	Asset Improvement and Maintenance (Water and Wastewater)	<b>Strategic Plans:</b>	Infrastructure / Sustainability, Maintenance
<b>Division:</b>	Capital - Water	<b>Project Type:</b>	WATER
<b>Budget Year:</b>	2026	<b>Active:</b>	Yes

<b>Description</b>				<b>Comments</b>			
This project provides for an on-going program to fund the looping of dead-end watermain which provides a permanent solution for adverse water conditions; such as, dirty water and low chlorine residual.  Work will be completed by City staff and equipment.				Dead-end watermain creates an environment for adverse water conditions within the main. These adverse water conditions are currently being mitigated through continuous flushing which does waste water. Looping dead-end watermain provides a permanent solution to the adverse water conditions caused by these dead-ends and reduces the water waste through continuous flushing.  The 2026 program will provide for looping at Franklin, Hammond, and Vanier.			
<b>Scenario Description</b>				<b>Scenario Comments</b>

Description				Comments			
This project provides funds for the maintenance and repairs on the four fire stations in the City.				The program includes interior rehabilitation of fire stations and energy efficiency upgrades which will include, overhead and main door replacement, energy efficient upgrades (lighting), replacement of windows and emergency capital repairs.			
Scenario Description				Scenario Comments			
				The Capital Forecasts from 2027 to 2035 will be used to address major capital costs associated with aging infrastructure. The funds will also be used to repair/ replace major building items as well as improve the station's energy efficiencies. Plans for building repairs or energy efficiency upgrades are developed a year in advance of the budget based on information derived from station maintenance reports.

<b>Title:</b>	Flush Watermains 2026 On-going	<b>Project Stage:</b>	Committee of Council Review	
<b>Asset Type:</b>	Asset Improvement and Maintenance (Water and Wastewater)	<b>Strategic Plans:</b>	Infrastructure / Sustainability, Maintenance	
<b>Division:</b>	Capital - Water	<b>Project Type:</b>	WATER	
<b>Budget Year:</b>	2026	<b>Active:</b>	Yes	

<b>Description</b>	<b>Comments</b>																																																																									
This project provides for the on-going annual directional and dead-end flushing of the City's watermains. The project is essential in order to extend the watermains' life cycle and it allows the City to remain compliant with the Ministry of Environment Regulations. Funds are also used for infrastructure upgrades and when system deficiencies are noted.	The on-going program is designed to clean existing watermains thereby extending the life cycle, and identifying problem infrastructure that can then be repaired in non-emergency situations. The program is recommended as a best practice by the Ministry of Environment and Climate Change.																																																																									
<b>Scenario Description</b>	<b>Scenario Comments</b>																																																																									
	The following details support the Capital Forecast for 2027 to 2035: Watermain Flushing of the distribution infrastructure as per recommended best practices by MECP

Description				Comments			
This project provides for the information and communication technology for the City's business units at City Hall and 110 remote site locations. This includes computer hardware and software, mobile technology, telephony hardware and software, network infrastructure and security, Geographic Information Systems, and network connectivity.				<p>The project provides for the implementation and replacement of the technology utilized by the City based on life cycles and annual requirements.</p> <p>In 2026, ongoing projects include the replacement of software and outdated equipment such as desktops and laptops to ensure staff have access to reliable and modern tools for daily operations. This effort is being expanded to encompass the replacement of aging wireless infrastructure to improve connectivity and performance, as well as the upgrade of outdated security camera systems to enhance safety and monitoring capabilities across all facilities.</p> <p>These projects underscore the City's commitment to maintaining a secure, efficient, and forward-looking technology environment. By addressing outdated systems and investing in modern infrastructure, the City is ensuring the reliability and resilience of its operations while aligning with its strategic goals for improved service delivery and risk mitigation.</p>

Description				Comments			
This project provides for the information and communication technology for the Water and Wastewater department. This includes computer hardware and software, telephony hardware and software, and network infrastructure and connectivity. In addition, other special information services projects, related specifically to water and wastewater activities, are also funded from this project.				This project represents the technology requirements for the water and wastewater related activities. This includes the information and communication technology to support the Water Treatment Plant, Wastewater Treatment Plant and the water networks including the System Control and Data Acquisition (SCADA) for the entire system to meet local, provincial and federal regulations.  In 2026, capital initiatives will focus on upgrading the technology systems that manage and control the water and wastewater systems to ensure enhanced reliability, efficiency, and security. These upgrades will include critical security updates to protect the integrity of operational data and systems from evolving cyber threats, as well as communication updates to improve reporting and alerting capabilities. By enhancing these systems, the department will ensure more timely and accurate data collection, enabling better decision-making and faster response times to issues such as system failures.

# 2026 CAPITAL BUDGET | Capital Project Information Sheets by Project Number

<b>Number:</b>	6723FD	<b>Scenario:</b>	Main
<b>Title:</b>	Fire Equipment Replacement 2026 On-going	<b>Project Stage:</b>	Committee of Council Review
<b>Asset Type:</b>	Asset Improvement and Maintenance (General)	<b>Strategic Plans:</b>	Infrastructure / Sustainability, Maintenance,...
<b>Division:</b>	Capital - Community Services	<b>Project Type:</b>	FIRE DEPARTMENT
<b>Budget Year:</b>	2026	<b>Active:</b>	Yes

Description	Comments
This project provides for the replacement of the Fire Department's aging equipment as well as the purchase of equipment to outfit new fleet purchases.	Funding is for the replacement of aging equipment and analysis of needed equipment for enhanced and efficient service delivery. Equipment recommendations are researched by the North Bay Fire and Emergency Services equipment committee.  In 2026, this program will provide for the maintenance or replacement of the following pieces of equipment: hose, nozzles, extrication equipment, power saws, ventilation fans, safety equipment (helmets, gloves, etc.), and tools, as needed.

Scenario Description	Scenario Comments
	The Capital Forecasts from 2027 to 2035 will be used to address major equipment costs associated with ongoing operations. The funds will be used to repair/ replace equipment necessary for North Bay Fire and Emergency Services to enhance the ability to deliver an effective response to emergency incidents.

<b>Title:</b>	Fire Bunker Gear Replacement Program 2026 On-going	<b>Project Stage:</b>	Committee of Council Review
<b>Asset Type:</b>	Asset Improvement and Maintenance (General)	<b>Strategic Plans:</b>	Equipment Replacement
<b>Division:</b>	Capital - Community Services	<b>Project Type:</b>	FIRE DEPARTMENT
<b>Budget Year:</b>	2026	<b>Active:</b>	Yes

Description	Comments
This project provides funds to replace bunker gear (firefighting ensemble) for the firefighters. In order to meet the requirements under the Occupational Health and Safety Act, bunker gear is required to be replaced every 10 years as stipulated in NFPA Standard 1851.	The program is based on the anticipated costs for required bunker gear replacements. The bunker gear replacement program is also part of the larger cancer reduction initiative. 2026 is a major bunker gear replacement year.

Scenario Description	Scenario Comments
	The following details support the Capital Forecast for 2027 to 2035: 2027-2030 Bunker gear, as needed 2031 Bunker gear major replacement year 2032-2034 Bunker gear, as needed

<b>Description</b>		<b>Comments</b>	
This project will provide electrical upgrades to the Wastewater Treatment Plant.		Many electrical components have passed their useful life and represent a significant risk to the continuous operation of the facility. The funding provides for materials as well as a staff electrician to work on the projects; including, replacement and repair of conduits, MCC's, process controls, SCADA, lighting, and various electrical components. In 2026, the replacement of the blower building MCC, electrically actuated valves, mixing system for the digesters, emergency electrical repairs are planned.

<b>Description</b>				<b>Comments</b>			
This project provides for the rehabilitation and restoration of deficiencies in the sanitary sewer system.				The 2026 program will be used for McIntyre connection servicing new lands and upgrades to Copeland from Bell to Durill.			
It will reduce infiltration and excessive loading of ground water into our sanitary sewer system. Work is completed by city staff and equipment.

Description				Comments	
This project provides for the engineering services for maintenance of a traffic model and analysis for the City's transportation network.				Traffic models can be used to analyze the capacity of the existing road network system, analyze the impacts and feasibility of expanding the system, or help identify improvements and potential efficiencies.	
				The model will assist with development review in identifying system capacities and issues for new development and redevelopment, and the need for road and intersection upgrades as a result of new development.	
				Once established, the model will need to be maintained on a regular basis for changes in the system.	
				This funding will be used for the maintenance of the traffic model and undertaking analyses.	
Related projects include 6784ST/SS/WS					
Scenario Description				Scenario Comments	
				The following details support the Capital Forecast for 2027 to 2035:	
				Traffic data and traffic model updates, as well as specific traffic analyses will be needed on an on-going basis. This will support road safety implementation, capital project development, and analysis of various scenarios in support of development.

## 2026 CAPITAL BUDGET | Capital Project Information Sheets by Project Number

<b>Number:</b>	6788SL	<b>Scenario:</b>	Main
<b>Title:</b>	Street Light Replacement 2026 On-going	<b>Project Stage:</b>	Committee of Council Review
<b>Asset Type:</b>	Asset Improvement and Maintenance (General)	<b>Strategic Plans:</b>	Maintenance
<b>Division:</b>	Capital - Infrastructure & Operations	<b>Project Type:</b>	STREET LIGHTS
<b>Budget Year:</b>	2026	<b>Active:</b>	Yes

Description	Comments
This project provides for the replacement of street light poles, lights, and hardware.	<p>There are over 5,000 street lights in the City. As a new initiative, failed streetlights will be rebuilt by City staff and reinstalled in the field as other lights fail. This initiative results in a significant cost savings as it will cost approximately 40% less to rebuild a light than to purchase a new one.</p> <p>in 2025, numerous street light poles (sectional direct buried poles and decorative poles) had failed and, subsequently, removed. Through this, further review was conducted which identified that several poles were nearing the end of their useful lives and would need to be replaced. The replacement of street light poles has been added to this capital replacement program in 2026 and will be considered part of the on-going replacement program.</p> <p>This capital will be used to purchase materials required to rebuild lights as well as to replace poles that have reach the end of useful life.</p>

<b>Description</b>		<b>Comments</b>	
The project provides for the necessary periodic scheduled maintenance on the digesters and primary clarifiers at the Wastewater Treatment Plant to ensure this equipment is operating in the most optimal fashion.		There are 4 digesters at the Wastewater Treatment Plant. As per best operating practices, this project allows for each tank to be drained and cleaned, approximately, every 10 years.	
<b>Scenario Description</b>		<b>Scenario Comments</b>	
		The following details support the Capital Forecast for 2027 to 2035: Draining and cleaning of Digester 2 in order to improve operational efficiency.

<b>Description</b>				<b>Comments</b>			
This project provides for the collection and processing of engineering related data and the purchase and replacement of equipment in support of the data collection.				Engineering data can include such things as traffic data and sewer flow monitoring data.			
				Sewer flow monitoring supports design for sanitary pumping station upgrades and replacements. It also supports a flow monitoring program to identify areas and sources of infiltration and inflow (sewer pumps) to focus in on the most critical areas. A reduction in infiltration/inflow will reduce the demands on the Wastewater Treatment Plant.			
				The 2026 program will be utilized to repair flow monitoring equipment and for data software fees.			
				Related projects include 6809RD.			
<b>Scenario Description</b>				<b>Scenario Comments</b>

<b>Title:</b>	Interlocking Brick Sidewalk & Retaining Wall Replacement 2026 On-going	<b>Project Stage:</b>	Committee of Council Review	
<b>Asset Type:</b>	Asset Improvement and Maintenance (General)	<b>Strategic Plans:</b>	Infrastructure / Sustainability	
<b>Division:</b>	Capital - Infrastructure & Operations	<b>Project Type:</b>	ROADS	
<b>Budget Year:</b>	2026	<b>Active:</b>	Yes	

<b>Description</b>	<b>Comments</b>																																																																					
This project provides for the replacement of failing interlock brick sidewalks and retaining walls throughout the City.	<p>The City has multiple kilometers of interlock brick sidewalk and retaining walls on various roadways; including, Algonquin Ave., Fisher St., Oak St., Cassells, and McKeown. Much of the brick and retaining wall have experienced pre-mature failure because of road salt. This ongoing project will provide funds to remove and replace the worst areas of brick with traditional concrete sidewalk which is more durable.</p> <p>In 2026, this program will complete the replacements at locations determined by a 3rd party contractor's survey.</p>																																																																					
<b>Scenario Description</b>	<b>Scenario Comments</b>																																																																					
	The following details support the Capital Forecast for 2027 to 2035: 2027 to 2035 Annual survey, removal and replacement of brick sidewalk or retaining wall

<b>Title:</b>	Wastewater Treatment Plant - Structural Repairs 2026 On-going	<b>Project Stage:</b>	Committee of Council Review
<b>Asset Type:</b>	Asset Improvement and Maintenance (Water and Wastewater)	<b>Strategic Plans:</b>	Infrastructure / Sustainability, Maintenance
<b>Division:</b>	Capital - Sewer	<b>Project Type:</b>	SANITARY SEWER
<b>Budget Year:</b>	2026	<b>Active:</b>	Yes

Description				Comments			
This project provides for design and construction related to structural repairs required at the Wastewater Treatment Plant in accordance with recommendations outlined in the 2011 condition assessment.				The Wastewater Treatment Plant has many concrete tanks that are used for process treatment streams. The tanks are between 40-65 years old and their structural integrity is diminishing. All exposed concrete elements of the tanks show a great deal of cracking in the walls. The tanks' expansion joints are generally in poor condition and overgrown with vegetation in some locations. The concrete must be repaired before further damage and/ or leaking occurs.  In 2026, works will include engineering design and tender for future structural repairs.

<b>Title:</b>	Rear-Lot Drainage Rehab 2026 On-going	<b>Project Stage:</b>	Committee of Council Review
<b>Asset Type:</b>	Asset Improvement and Maintenance (General)	<b>Strategic Plans:</b>	Infrastructure / Sustainability, Maintenance
<b>Division:</b>	Capital - Infrastructure & Operations	<b>Project Type:</b>	STORM SEWER
<b>Budget Year:</b>	2026	<b>Active:</b>	Yes

<b>Description</b>		<b>Comments</b>	
The project involves the engineering and construction services for rehabilitation of rear-lot drainage.		Rear-lot drainage infrastructure includes ditches, swales, and storm sewer systems located in easements on private property, typically residential property. Over time, drainage characteristics and needs can change, as well, historical encroachments and amendments by homeowners can also affect drainage characteristics, all necessitating rehabilitation of the rear-lot drainage.	
Engineering services will include pre-engineering (survey and geotechnical), preliminary design, detailed design, agency approvals, contract drawings, specifications, tendering, and construction.		Current repairs are planned for the next couple of years are Bain Dr., Bunting Dr., and Melissa Crescent.	
<b>Scenario Description</b>		<b>Scenario Comments</b>

<b>Title:</b>		Resurfacing Structure Repair 2026 On-going		<b>Project Stage:</b>		Committee of Council Review	
<b>Asset Type:</b>		Asset Improvement and Maintenance (General)		<b>Strategic Plans:</b>		Infrastructure / Sustainability, Maintenance	
<b>Division:</b>		Capital - Infrastructure & Operations		<b>Project Type:</b>		ROADS	
<b>Budget Year:</b>		2026		<b>Active:</b>		Yes	

<b>Description</b>		<b>Comments</b>	
The project involves the engineering and construction services for rehabilitation structures ahead of the annual resurfacing contract.		The annual resurfacing contract includes repair and rehabilitation to the upper sections of structures in the roadway, including catch basins and manholes. For catch basins, this requires removal and replacement of curb and gutter, which often cannot occur on the same schedule required for the adjacent asphalt rehabilitation. This contract will undertake the repair and rehabilitation of the structures and curbs in advance of the resurfacing contract.	
Engineering services will include survey, design, contract drawings, specifications, tendering, and construction.			
<b>Scenario Description</b>		<b>Scenario Comments</b>	
		The following details support the Capital Forecast for 2027 to 2035: Repair and rehabilitation of the structures and curbs in advance of the resurfacing contract

Description	Comments
This project provides for an on-going program of intersection crossing upgrades throughout the City and is used to assist the City in maintaining compliance with the Accessibility Act.	In 2026, the program will upgrade sidewalks at intersection crossings to include tactile plates in order to comply with O. Reg. 191/11 Integrated Accessibility Standards.  Signalized intersections will be the priority followed by high travelled corridors.

Scenario Description	Scenario Comments
	The following details support the Capital Forecast for 2027 to 2035: 2027-2035 Installation of tactile indicator panels as identified as priority during the year

<b>Title:</b>	Sanitary Sewer Major Rehabilitation Program 2026 On-going	<b>Project Stage:</b>	Committee of Council Review
<b>Asset Type:</b>	Asset Improvement and Maintenance (Water and Wastewater)	<b>Strategic Plans:</b>	Infrastructure / Sustainability
<b>Division:</b>	Capital - Sewer	<b>Project Type:</b>	SANITARY SEWER
<b>Budget Year:</b>	2026	<b>Active:</b>	Yes

<b>Description</b>		<b>Comments</b>		
This program involves the engineering and construction services for the major rehabilitation of various sanitary sewers throughout the City.  Engineering services will include pre-engineering (survey and geotechnical), preliminary design, detailed design, agency approvals, contract drawings, specifications, tendering, and construction.		Numerous sections of the sanitary sewer infrastructure within the City are aging and in need of rehabilitation. This project will rehabilitate portions of the existing sanitary sewer system to provide resiliency in the system and minimize future emergency repairs, as well as mitigating risk to undermining existing structures and the transportation network. Several methods of rehabilitation will be implemented, including cured-in-place-pipe (CIPP) relining, directional drilling, and sprayed-in-place-pipe (SIPP) relining.  This project directly supports the initiatives outlined in the Asset Management Plan by implementing actions that improve asset performance, reliability, and sustainability.  Related projects include 6900ST/WS

<b>Asset Type:</b>	Asset Improvement and Maintenance (General)	<b>Strategic Plans:</b>	
<b>Division:</b>	Capital - Infrastructure & Operations	<b>Project Type:</b>	STORM SEWER
<b>Budget Year:</b>	2026	<b>Active:</b>	Yes

<b>Description</b>			<b>Comments</b>	
This program involves the engineering and construction services for the storm infrastructure upgrades in response to climate adaptation needs.  Engineering services will include pre-engineering (survey and geotechnical), preliminary design, detailed design, agency approvals, contract drawings, specifications, tendering, and construction.			This capital project involves critical upgrades to stormwater infrastructure to address the increasing impacts of climate change. The initiative focuses on enhancing system capacity, improving flood resilience, and mitigating risks to public safety and property. By modernizing aging infrastructure and integrating adaptive design strategies, the project supports long-term sustainability and aligns with the municipality's climate adaptation goals.  This project directly supports the initiatives outlined in the Asset Management Plan by implementing actions that improve asset performance, reliability, and sustainability.	
<b>Scenario Description</b>			<b>Scenario Comments</b>	
			The following details support the Capital Forecast for 2027 to 2035:  Stormwater enhancement needs will be monitored and identified on a continuous basis.
